ACADEMIC CALENDAR (2023-24)

2023	
August 28	Fall Semester Begins
September 6	Opening Ceremony
October 1	Cyprus Independence Day
October 28	Ochi Day
December 4-9	Make-up days and Reading Week
December 11-22	Final Examinations
December 24-January 1	Christmas and New Year Vacation
2024	
January 6	Epiphany
January 18	Spring Semester Begins
March 18	Green Monday
March 25	Greek Independence Day
April 1	National Day
April 26-30 and May 2	Make up days and Reading Week
May 1	Labor Day
May 3-6	Easter Vacation
May 7-18	Final Examinations
June 10	Summer Session Begins
June 24	Orthodox Whit Monday
August 2-3	Make up day and Reading Period
August 5-10	Final Examinations
August 15	Assumption Day

THE UNIVERSITY

The American University of Beirut—Mediterraneo (AUB Mediterraneo) is a private, independent, nonsectarian institution of higher learning founded in 2022. It functions under a charter from the Government of Cyprus and is governed by a private, autonomous Board of Trustees.

The university has three faculties: Faculty of Engineering, Faculty of Business, and the Faculty of Arts and Sciences. At present, the American University of Beirut—Mediterraneo offers programs leading to bachelor's and master's degrees.

The language of instruction is English.

Accreditation

Degrees awarded by the American University of Beirut—Mediterraneo are officially registered with the Ministry of Education, Sport and Youth in Cyprus and are accredited by the Cyprus Agency of Quality Assurance and Accreditation of Higher Education (CYQAA). AUB Mediterraneo is also an approved branch campus of the American University of Beirut (AUB) by the New York State Education Department (NYSED) and the Middle States Commission on Higher Education (MSCHE). MSCHE is an institutional accrediting agency recognized by the U.S. Secretary of Education.

AUB, the mother institution of AUB Mediterraneo, was founded in 1866 and has operated since under a charter granted by the New York State Education Department (NYSED), which registers the university's degree programs. AUB is also accredited as an institution by MSCHE: www.msche.org, 1007 North Orange Street, 4th Floor, MB #166, Wilmington, DE 19801, 267-284-5011.

Vision

American University of Beirut — Mediterraneo aspires to be a hub of knowledge exchange and creation that leads social, environmental, and technological advancement through state of the art and pioneering educational offerings, cutting-edge research and creation, and innovative community service.

Mission

American University of Beirut — Mediterraneo is a twin campus of the American University of Beirut, and as such, it brings over 155 years of experience in higher education and research to another part of the world. With its liberal-arts model of higher education and experiential learning opportunities, its support for cutting-edge research and community service orientation, it aims to prepare critical thinkers, global leaders, innovators and responsible global citizens. The University provides an innovative, supportive, and inclusive learning environment that nurtures undergraduate and graduate learning. AUB—Mediterraneo constitutes a unique hub for distinguished collaborative research, forward looking intercultural communication and exchange, as well as a site for intellectual, professional, social, and personal growth.

Equal Opportunity Statement

AUB Mediterraneo is committed to the principle of equal opportunity and does not discriminate on the basis of race, color, religion, age, national or ethnic identity, sex, gender or gender identity, marital status, disability, genetic predisposition or carrier status, alienage or citizenship status, political affiliation, or any legally protected characteristic in its programs or activities. This includes prohibition against sexual harassment and sexual violence as mandated by Title IX of the Education Amendments of 1972. Inquiries or complaints may be addressed to the Office of the Rector.

History

In 1862, American missionaries in Lebanon and Syria, under the American Board of Commissioners for Foreign Missions, asked Dr. Daniel Bliss to withdraw from the evangelical work of the mission in Lebanon to found a college of higher learning that would include medical training. It was felt that this college should have an American educational character, should be administered independently from the mission, and should be maintained by its own funds. Dr. Bliss traveled to the United States in the summer of 1862 to solicit funds for this new enterprise. By August 1864, he had raised \$100,000 but, because of inflation during the Civil War, it was decided that he should raise a sterling fund in England to start the operations of the college, leaving the dollar fund to appreciate. After collecting £4,000 in England, Dr. Bliss traveled to Beirut in March 1866. On April 24, 1863, while Dr. Bliss was raising money for the new school, the State of New York granted a charter under the name of the Syrian Protestant College. The college opened with its first class of 16 students on December 3, 1866.

The cornerstone of College Hall, the first building on the present campus in Ras Beirut, was laid on December 7, 1871, by the Honorable William E. Dodge, Sr., then Treasurer of the Board of Trustees. At the ceremony, President Daniel Bliss expressed the guiding principle of the college in these words:

"This college is for all conditions and classes of men without regard to color, nationality, race or religion. A man, white, black or yellow, Christian, Jew, Mohammedan or heathen, may enter and enjoy all the advantages of this institution for three, four or eight years; and go out believing in one God, in many gods, or in no God. But it will be impossible for anyone to continue with us long without knowing what we believe to be the truth and our reasons for that belief."

College Hall and the first medical building were completed and put to use in 1873, and the bell in the tower of College Hall pealed for the first time in March 1874. Since the earliest years, the university has continually expanded and developed new faculties and programs. In 1867, it started the School of Medicine. In 1900, the university established a school of commerce, which was later incorporated into the Faculty of Arts and Sciences. In 2000, that school regained its independence and was later named the Suliman S. Olayan School of Business. In 1905, a hospital and nursing school were established, well known today as the American University of Beirut Medical Center and the Rafic Hariri School of Nursing. In 1910, the university opened a School of Dentistry, which operated for thirty years. In the early years of the 1950s, several program expansions took place. The Faculty of Engineering and Architecture was established in 1951 and was renamed the Maroun Semaan Faculty of Engineering and Architecture (MSFEA) in 2017; the Faculty of Agricultural and Food Sciences—first opened its doors in 1952; and the School of Public Health—now the Faculty of Health Sciences—was founded in 1954.

On November 18, 1920, the Board of Regents of the University of the State of New York changed the name of the institution from the Syrian Protestant College to the American University of Beirut; other charter amendments expanded the functions of the university.

In August 2023, the American University of Beirut — Mediterraneo, a twin campus of the American University of Beirut, welcomed its inaugural class into three faculties and seven programs in Pafos, Cyprus.

ADMISSIONS

Undergraduate Students

All undergraduate degrees are four-years in duration. AUB Mediterraneo programs are cohort- based, which means that we conduct only one admission cycle per year. All students start in the fall term, which begins at the end of August or the beginning of September depending on the academic calendar for any particular year.

Students become eligible for admission by completing 12 years of schooling and finishing one of the following programs: High school program, IGCSE (O Levels), IB Certificate or any other school leaving certificate, Lebanese Baccalaureate, French Baccalaureate, Syrian Baccalaureate, Jordanian Tawjihi, German Abitur, Official Government Secondary School leaving Certificate, full IB Diploma or IGCSE/GCE (three A levels or six AS levels in addition to six O levels, excluding Arabic).

Prospective students must submit an undergraduate first-year application with the following documents:

- High school transcript for grades 10 and 11 or their equivalent
- Official form for Applicant Secondary School Record
- An entrance exam is required which can be one option from the below *:
 - Scholastic Aptitude Test (SAT)

The SAT can be taken several times. Students can benefit from "super scoring" (i.e. taking the maximum score for each section--Math or Evidence-Based Reading and Writing--from all sessions).

- The International AS-level exam:
 3 AS-Levels with the following subjects:
 Mathematics (Math or Math Further), and two non-language subjects
- Cypriot Lyceum B Class standardized exams

Two subjects, one in Math (Basic or Advanced), and another non-language subject

Admission is competitive and is based on the results of the entrance exam scores provided and the high school transcript as follows:

- 50% on an entrance exam (SAT, AS-Levels, or Cypriot Lyceum B Class standardized exams)
- 50% on the standardized high school averages in grades 10 and 11

The standardized high school averages of students are compared to their class average and to the average of applicants from the same school.

There are no specific cut-off scores. The higher the student's score, the better the chances of being admitted.

* Important Notes on the entrance exam types:

- Only one exam type is considered, and in case multiple exam types are provided one exam per the following precedence order will be chosen: SAT test then AS-level exams, and then Cypriot Lyceum B Class standardized exams.
- The AS-Level or Cypriot Lyceum B Class standardized exams results for the required subjects are to be provided before the admission application deadline to complete the application. For the SAT results, refer to the deadline section below under "Latest SAT session considered".
- The university reserves the right to stop considering the SAT alternative exams (AS or Cypriot Lyceum B Class standardized exams) from the above list in any term after Fall 2023. Thus students are encouraged to plan and take the SAT exam when applying to Fall 2024 or later.

Early/Merit admission

Please note that <u>a special early admission plan for fall admission has been designed for truly outstanding</u> students who must fulfill the following additional requirements concurrently:

Submit the undergraduate first-year application by the early admissions deadline

Be ranked within the top 25 percent of their class in Grade 10 and Grade 11

Entrance exam score(s) is required which can be one option from the types in the below table*

An Interview, if the SAT test scores are not provided.

Applying to	Majors	SAT (super score) Evidence- Based Reading and Writing + Math	International AS-level exam (3 subjects) Math or Math Further & 2 non-language subject	Cypriot Lyceum B Class standardized exams (2 subjects) Math (Basic or Advanced) & 1 non-language subject
Arts	Philosophy, Politics, and Economics	1130	ABB score with an A score in Mathematics (Math or Math - Further)	17-18 grade on each subject
Business	<u>Business</u> Administration in <u>Management</u>	1180	AAB score with an A score in Mathematics (Math or Math - Further)	18-20 grade on each subject
Sciences	<u>Computer Science</u> <u>Industrial</u> <u>Engineering</u> <u>Psychology</u>	1200	AAB score with an A score in Mathematics (Math or Math - Further)	18-20 grade on each subject

Applicants who apply early but are not admitted early will be considered in regular admissions.

Grade 12 records do not affect admission decisions because students apply to AUB Mediterraneo at the beginning of grade 12. Nevertheless, once the student is admitted, she or he will be required to present evidence of having met the following conditions no later than one month prior to the start of the term:

- Successfully met the English language requirement
- Successfully completed Grade 12 or equivalent
- Successfully received the certificate or diploma (recognized by the Ministry of Education of the originating country) on the basis of which admission was sought (example: Lebanese/French Baccalaureate, IB Diploma, GCE, etc.)

As such, all admission offers are conditional, and admitted applicants may not register until all three of these conditions are met.

Transfer Students

If a student completes **fewer than** 108 ECTS at another recognized institution of higher learning, the following documents will be required to apply as a transfer student:

- 1. High school records during the last three years of high school (grades 10, 11, and 12);
- 2. SAT1 scores; or AS level scores; or Lyceum B scores
- 3. Official transcripts from all institutions attended—a complete record of study;
- 4. Detailed syllabi (course outlines) of all courses taken;
- Certified copy of high school diploma or secondary school certificate, based on at least twelve years of schooling (e.g., Lebanese Baccalaureate, French Baccalaureate, IB Diploma, GCE, high school diploma, etc.)
- 6. English language requirement (**upon admission and prior to matriculation**) Admission in this case is competitive and also based on the process described above.

If a student completes **108 or more** ECTS at another recognized institution of higher learning, the following documents will be required:

- 1. Official transcripts from all institutions attended—a complete record of study;
- 2. Detailed syllabi (course outlines) of all courses taken;
- Certified copy of high school diploma or secondary school certificate, based on at least twelve years of schooling (e.g., Lebanese Baccalaureate, French Baccalaureate, IB Diploma, GCE, high school diploma, etc.)
- 4. English language requirement (**upon admission and prior to matriculation**) In this case, admission is competitive and based on university GPA.

Transfer of credits to "advanced level high school courses".

The Council can accept transfer of credits from recognized external examinations, professional experience or non-recognized institution/non accredited study program, up to 10% of the total credits required to obtain a degree.

Therefore, credits for obtaining a Bachelor's degree from "**advanced level high school courses**" could be transferred, provided that they do not exceed 10% of the total credits required for the Bachelor's degree, i.e. 24 ECTS (for a four-year level programme)

You may receive credit transfer for courses taken at another recognized university only if the courses match AUB Mediterraneo requirements in terms of contents and evaluation. Transferable credits will be determined only after you submit your complete AUB Mediterraneo application and upon the recommendation of the department(s) concerned after review of the syllabi of the courses you wish to transfer.

In cases where prospective students wish to register to study any program of the American University of Beirut - Mediterraneo Paphos

with the aim of obtaining a Bachelor's degree or a Master's degree, by transferring credits from previous studies in the same or a related subject at another recognized university/s in Europe or outside Europe, they should fill in the American University of Beirut - Mediterraneo, from which the degree will be awarded, an essential part-percentage of the studies.

According to the policy decisions of KY.S.A.T.S., for degrees at the Bachelor's level, the essential partpercentage of the studies that must be done at the institution that awards the degree is at least three semesters of full-time study for three-year study cycles and at least four semesters of full-time study for fouryear study cycles.

Credit units, that is, transferable to a degree-level program of study in the same or a related subject, from previous studies, must not exceed half the program of study.

According to the policy decisions of KY.S.A.T.S., for Master's degrees, the essential part-percentage of the studies that must be done at the institution that awards the degree is two-thirds of the program,

The credits that can be transferred to program of Master's level studies in the same or related subject from previous studies, should not exceed the one third of the program.

The specified number of courses to be transferred is the responsibility of the institution that will award the degree and is carried out if there are corresponding courses in the program to which the transfer is made.

We normally consider applications for transfer from universities that are accredited by the ministry of higher education in their home countries.

Transfer Students from the American University of Beirut to the American University of Beirut – Mediterraneo

The transfer of courses corresponding to a maximum of two semesters of study (up to 68 ECTS) from studies to be carried out at the American University of Beirut, Lebanon, to programs of the American University of Beirut - Mediterraneo in Paphos in the same or a related subject, is accepted provided that it concerns Degree-level titles.

For postgraduates' studies, the transfer of lessons from programs of the AUB Lebanon, must not exceed 30 ECTS.

According to the policy decisions of KYSATS for postgraduates Master's level degrees, the essential partpercentage of the studies to be done at the institution awarding the degree is two-thirds of the program. A specified number of the courses to be transferred is the responsibility of the institution that will award the degree and is carried out if there are corresponding courses in the program to which the transfer is made.

Second Degree

For candidates who have completed a bachelor's degree (BA or BS) and are interested in completing a second degree, the following applies:

Graduates who have been away from AUB Mediterraneo **for less than** two years after graduation must complete an application for a second degree.

Non-AUB Mediterraneo graduates or graduates who have been away from AUB Mediterraneo for more than

two years after graduation must submit an application for admission with the following:

- 1. Official transcripts from all institutions attended—a complete record of study;
- 2. Detailed syllabi (course outlines) of all courses taken-not required for AUB Mediterraneo graduates;
- 3. Certified copy of high school diploma or secondary school certificate, based on at least twelve years of schooling (e.g., Lebanese Baccalaureate, French Baccalaureate, IB Diploma, GCE, high school diploma, etc.)
- 4. English language requirement (upon admission and prior to matriculation)

Graduate Students

Applicants to master's programs at AUB Mediterraneo are required to provide the following:

- Evidence of undergraduate grade average of at least 3.3 (or standardized equivalent from other institutions of higher learning) in the major field of study and a cumulative average of at least 2.7 (or standardized equivalent) for all work leading to a bachelor's degree or its equivalent from AUB or other recognized institutions of higher learning. In the Faculty of Engineering, an average of at least 3.3 is required for the last two years of undergraduate study or its equivalent at AUB or other universities as determined by the faculty.
- Official transcripts from all institutions attended—a complete record of study;⁴¹
- Two recommendation letters from qualified academics;
- A detailed statement of purpose (400-500 words) for each choice (major or concentration) indicating the purpose for pursuing graduate study in the particular field and specifying the applicant's research interests and/or practical experience in the field;
- Additional requirements specific to each graduate program, as specified in the department or program listings; and
- Evidence to demonstrate the English language requirement (upon admission and prior to matriculation).

In all cases, an application processing fee is required.

Graduate Student Leave of Absence

All graduate students are expected to make steady and satisfactory progress toward the completion of degrees.

Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval of the faculty, which could include a requirement for reapplication.

ENGLISH LANGUAGE REQUIREMENT READINESS FOR UNIVERSITY STUDY IN ENGLISH (RUSE)

Undergraduate applicants

Prior to registration at the university, students admitted to AUB Mediterraneo must demonstrate a level of English proficiency consistent with the demands of a program carried out almost exclusively in the English language.

Undergraduate applicants can demonstrate RUSE by submitting satisfactory and valid scores from one of several tests. A score is considered *satisfactory* if it meets or exceeds the minimum requirement set by AUB; it is considered *valid* if the test date is recent enough. Each test has its separate requirement for having satisfactory and valid scores, as detailed in the table below.

Demonstrating RUSE for undergraduate applicants			
Test Minimum Score Validity			
SAT (evidence-reading and writing)	530	2 years	
TOEFL iBT	79	2 years	

¹ Intentionally omitting any university studies will result in dismissal from the AUB Mediterraneo

IELTS (Academic)	6.0	2 years
------------------	-----	---------

When to demonstrate RUSE

All undergraduate applicants are requested to demonstrate RUSE as early as possible after receiving their admission decision from AUB Mediterraneo.

Graduate Applicants

Master's applicants, including graduate diploma applicants, can demonstrate RUSE by submitting satisfactory and valid scores from one of several tests. A score is considered *satisfactory* if it meets or exceeds the minimum requirement set by AUB; it is considered *valid* if the test date is recent enough.

Each test has its separate requirement for having satisfactory and valid scores, as detailed in the table below.

Demonstrating RUSE for graduate applicants			
Test	Minimum Score	Validity	
TOEFL iBT	97	2 years	
IELTS (Academic)	7	2 years	
GRE (Verbal)	147	5 years	
GMAT (Verbal)	25	5 years	

When to demonstrate RUSE

All graduate applicants are requested to demonstrate RUSE as soon as possible upon receiving their admissions decision from AUB.

GENERAL UNIVERSITY ACADEMIC INFORMATION

UNDERGRADUATE

Academic Rules and Regulations

The general policies, procedures and minimum requirements for advanced degrees are stated in this section. However, each program has specific degree requirements which are detailed in the respective program descriptions under later sections of this catalogue.

Academic Advisors

Each student has an academic advisor who mentors the student in course selection. Names of advisees and their respective advisors are available through the JICS (Jenzabar Internet Campus Solution)

Categories of Students

Full-Time Students carry a minimum load of 24 ECTS per term, or 12 ECTS in the summer.

Part-Time Students are restricted to those who need fewer than 12 credits to complete work for an undergraduate degree or to those who are granted special permission from the appropriate faculty committee for health or family reasons.

Non-Degree Students

The category of non-degree students is restricted to those students who are not working for a degree. Students in this section could be visiting, cross-registered, exchange, study abroad, special not working for a degree and auditing students.

Auditing students

Auditors are those who register to sit in on classes with the permission of the instructor and who do not take part in any evaluative exercise. Auditing students must be registered and must have settled their fees before being allowed access to any class. Applicants are not eligible to audit laboratory, studio or seminar courses. Since permission to audit is on a space-available basis, applicants are not permitted to register until after registration of regular students is complete.

The university does not grant academic credit for such work.

REGISTRATION

Requirements

Before proceeding to register, new students must ensure that all requirements for registration have been met, particularly conditions detailed in the admission letter from the Rector. These conditions include meeting the Readiness for University Studies in English and providing evidence that the student received the diploma, certificate, degree or level of university education on the basis of which s/he applied for and received admission to AUB Mediterraneo.

The Registration Guide is posted on the website and is included in the admissions package sent to students. Subsequent to confirmation that all conditions have been met, students should follow the steps in this guide.

Students can introduce final adjustments to their schedules during the drop and add period, which normally extends for one week starting the second day of classes.

Continuing students must follow the steps received in the email announcing the opening of the registration they receive from the Office of the Registrar.

In both cases, students may refer to the "Registration Instructional Video".

CROSS-REGISTRATION (Undergraduate and Graduate)

Students Enrolled at AUB Mediterraneo Taking Courses at Other Universities

A student studying at the AUB Mediterraneo may be allowed to cross-register for a course at other recognized academic institutions if the following three conditions are met:

- the course is required by AUB Mediterraneo;
- the course is not offered at AUB Mediterraneo during the term at the end of which the student expects to graduate;
- the course in which the student intends to cross-register is equivalent to a course that AUB Mediterraneo offers (the number and title of each of the two equivalent courses should be clearly indicated).

The chairperson of the department in which the student is majoring sends the Registrar a written statement confirming that all the conditions listed above have been met. The AUB Mediterraneo Registrar authorizes the student to cross-register. The student then submits the authorization to the concerned institution.

Students Enrolled at Other Universities Taking Courses at AUB Mediterraneo

For purposes of cross-registration, students studying at recognized academic institutions who wish to take courses at AUB Mediterraneo must do the following:

- secure permission from their institutions to take specified courses at AUB Mediterraneo
- secure permission from the dean of the faculty concerned at AUB Mediterraneo
- present the above permissions to the AUB Mediterraneo Office of the Registrar
- register in accordance with the instructions specified in the registration guide, copies of which are sent to the institutions.

STUDY ABROAD (UNDERGRADUATE)

AUB Mediterraneo undergraduate students may choose to study abroad in their penultimate year (or equivalent class in professional schools) in an approved program of study, without losing their status at AUB Mediterraneo. They may apply for an established program at a university that has an exchange agreement with AUB Mediterraneo, or they may initiate their own visiting student proposal for at a university of their choice that is recognized by AUB Mediterraneo.

The university may accept courses that were performed by AUB-MED students to other recognized universities, within the framework of student exchange or study abroad programs, with a maximum study period of one year.

Study abroad is strictly prohibited during the final semester of study at AUB Mediterraneo.

COURSE LOADS

Full-time students must carry a minimum load of 24 ECTS per regular term and 12 ECTS in the summer. A full-time student who wishes or is forced to reduce this minimum must petition the appropriate faculty committee.

The credit load in a regular term shall not be fewer than 24 ECTS for a student who continues to be on probation beyond one term or who is placed on three non-consecutive probations.

Full time students can normally register for up to 36 ECTS per term and up to 18 ECTS during the summer term. Students in the following categories must submit an overload petition to the appropriate faculty committee for permission to register for course loads above these maximum credit loads (Once approved the committee must inform the office of registrar in order to give the student the permission to overload)

REPEATING COURSES (UNDERGRADUATE)

A student who fails a required course must repeat the course at the earliest opportunity. No course may be taken more than three times, which includes course withdrawals. When a course is repeated, the highest grade is considered in the calculation of the cumulative average. All course grades remain in a student's permanent record and can figure in the calculation for graduation awards. Transferred courses from another institution that are repeated at AUB Mediterraneo will be assigned the grade earned at AUB Mediterraneo irrespective of the grade of the transferred course.

WITHDRAWAL FROM COURSES (UNDERGRADUATE)

Students can withdraw from only one required course per term. Students who wish to withdraw from more than one required course in any given term must petition the appropriate faculty committee for permission.

Students can withdraw from elective courses, down to a minimum of 24 ECTS, no later than 12 weeks (six weeks in the summer term) from the start of the term. Students receive a grade of 'W' for the course.

ATTENDANCE (UNDERGRADUATE)

Classes and Laboratories

- Students are expected to attend all classes, laboratories, and/or required fieldwork. All missed laboratory or fieldwork must be made up. A student is responsible for the work that is done and for any announcements made during their absence.
- Students who miss more than one-fifth of the sessions of any course in the first twelve weeks of the term (six weeks in the case of the summer term) can be dropped from the course. A faculty member who drops a student from the course for this reason must have stated in the syllabus that attendance will be taken.
- Students who withdraw or are withdrawn for excessive absence from a course receive a grade of "W."
- Students who do not withdraw from a course for excessive absence will receive a grade of F.
- A student may not withdraw from a course if the withdrawal results in being registered for fewer than 24 ECTS for regular terms and 12 for the summer.

EXAMINATIONS AND QUIZZES

Students who miss an announced examination or quiz must present an excuse considered valid by the instructor of the course. Unless stated otherwise in the course syllabus, the course instructor should then require the student to take a make-up examination. Make-up quizzes, midterms and class assignments must be completed before the final grade of the course is issued at the end of the term.

Only medical reports and/or qualified professional opinions issued by a recognized medical professional. Should there be a question about the validity of any excuse presented by the student, the matter shall be referred to the appropriate faculty committee. Instructors should make sure there is no time conflict between an exam and a regularly scheduled course.

RESIDENCE REQUIREMENTS (UNDERGRADUATE)

Undergraduate students must normally earn their final 90 ECTS at AUB Mediterraneo. An AUB Mediterraneo student in good academic standing who did not transfer to AUB Mediterraneo from another university and who wishes to study abroad may spend up to one year and earn up to 60 ECTS at another university with prior authorization from the advisor, the faculty, and the University Registrar. An AUB Mediterraneo student must spend the final term at AUB Mediterraneo.

-A minimum residency of four regular semesters at AUB Mediterraneo for bachelor programs is required -Two Summer sessions can be counted as one regular semester only once

GRADING SYSTEM

AUB Mediterraneo uses a 4.3 letter grade system according to the following table:

Course Letter Grade	Quality Points
A+	4.3
А	4.0
A-	3.7
B+	3.3
В	3.0
В-	2.7
C+	2.3
С	2.0
C-	1.7
D+	1.3
D	1.0
F	0.0
1	Incomplete
Р	Pass
PR	In Progress
W	Withdraw
NP	No Pass

The GPA is capped at 4.0

GPAs calculated using letter grades are actually weighted GPAs. This means that the letter grade you receive for a course is weighted by the course's credit value. For example, if you receive a B+ in a course that is a six ECTS course, your B+ is equivalent to a quality point value of 3.3, and this 3.3 is multiplied by six ECTS

hours for a total of 19.8. If you take a three ECTS course at the same time, and you earn an A-, this A- is equivalent to 3.7 quality points, and when multiplied by three ECTS results in a total of 11.1. For simplicity's sake, let's say that these were the only courses you took in this particular term, so your GPA would thus be (19.8 + 11.1) / 9 = 2.33.

Another Example in the table below will show you how to calculate your GPA for a term:

Course Name	Grade	Quality points	Multiply	ECT S	Total Quality points
Financial Accounting + Lab	А	4	х	9	36
Introduction to Business	B-	2.7	х	3	8.1
Academic English	С	2	х	6	12
Math for Social Sciences I	А	4	х	6	24
Intro to Psychological Science	A-	3.7	х	6	22.2
				-	Add all the above

102.3 Divide by total ECTS

Term GPA

3.41

30

CHANGE OF GRADE POLICY (Undergraduate and Graduate)

After grades are posted on the AUB Mediterraneo Student Information System, a change of grade is not allowed unless a demonstrable mistake was made in the correction of the final examination or in the calculation of the grade. In such a case, the instructor must complete a Change of Grade form and submit it to the chairperson of the department in which the course is offered with supporting evidence for the mistake warranting the change of grade. If the chairperson of the department approves the change of grade, s/ he will sign the form and transmit it for final approval to the dean.

Students have the right to access their corrected exams, including final exams, and to request review of their exams in case mistakes have been made in calculating grades or in corrections. The student's request to review the course grade shall be made to the course instructor within one week of the posting of course grades. In case the review by the instructor results in a change of course grade, the instructor shall complete the Change of Grade form in accordance with the procedure outlined by the faculty in which the course is offered.

If a dispute regarding the change of a grade continues, the student should discuss the issue with the chair of the department. If the student is still not satisfied, s/he may submit a petition to the faculty Academic and Curriculum Committee requesting further consideration.

INCOMPLETES

A student who receives an Incomplete grade for a course must petition or submit a valid reason for missing the work to the appropriate faculty committee within two weeks of the date of the scheduled final exam in order to obtain permission to complete the course. Coursework must be completed within one month of the start of the next regular term. In exceptional circumstances, the appropriate faculty committee may decide to give the student additional time to complete a course.

Incomplete coursework is reported as "I". Normally, "I" is followed by a numerical grade or a letter grade reflecting the evaluation of the student, available at the end of the term. This evaluation is based on a grade of zero on all missed work and is reported in units of five. If the work is not completed within the period specified, the "I" is dropped and the grade becomes final.

CREDIT TRANSFER

Transfer of credits to "advanced level high school courses".

The Council can accept transfer of credits from recognized external examinations, professional experience or non-recognized institution/non accredited study program, up to 10% of the total credits required to obtain a degree.

Therefore, credits for obtaining a Bachelor's degree from "**advanced level high school courses**" could be transferred, provided that they do not exceed 10% of the total credits required for the Bachelor's degree, i.e. 24 ECTS (for a four-year level programme)

For students studying abroad (Undergraduate Students)

Students who study abroad are required to get pre-approval for the courses they plan to register at the host institution.

Upon completion of the Study Abroad Program, students should ensure that the earned credits are transferred toward their degree requirements as follows:

- Students should submit the syllabi (including course learning outcomes if available) of all preapproved courses that they completed abroad, along with the Study Abroad transcript from the host university, to the relevant faculty Undergraduate Curriculum Committee for final approval of credits earned.
- Students must have their host institution provide an official transcript directly to the AUB Mediterraneo Office of the Registrar
- Approval of credit transfer is contingent upon achieving a minimum passing grade at the study abroad university.
- The Office of the Registrar can act directly if a similar course equivalence has already been approved by a Curriculum Committee. As each course is approved for equivalence, the Office of the Registrar dates the decision and ensures that all courses are re-evaluated after five years. Re- evaluation to determine whether a transfer course continues to meet AUB Mediterraneo requirements in terms of

content and credit hours includes assessment of course learning outcomes.

• Credits received through Study Abroad Programs will show as Pass/No Pass only on the AUB Mediterraneo transcript. Exceptionally, credits received by AUB Mediterraneo students through study at AUB in Beirut will reflect the grades earned, which will be included in the computation of the GPA.

Transfer credit courses from the AUB, Lebanon to AUB Mediterraneo

The transfer of courses corresponding to a maximum of two semesters of study (up to 68 ECTS) from studies to be carried out at the American University of Beirut, Lebanon, to programs of the American University of Beirut – Mediterraneo, provided that it concerns Degree-level titles.

For postgraduates' studies, the transfer of lessons from programs of the AUB Lebanon, must not exceed 30 ECTS.

FOR STUDENTS ADMITTED AS TRANSFER STUDENTS FROM OTHER INSTITUTIONS (UNDERGRADUATE STUDENTS)

Upon completion of registration for their first term at AUB Mediterraneo, students should make sure credits earned at other institutions that count toward program requirements at AUB Mediterraneo are transferred as follows:

- Students must submit the following to the Undergraduate Curriculum Committee of the relevant faculty for final approval of credits earned: They must submit the syllabi (including course learning outcomes if available) of all courses completed at the other institution, the transcript of the courses issued by the institution received, and a course equivalence form signed by the chair of the department offering the equivalent course. Students are encouraged to seek approval of credit transfer within one month of the start of their first term or as soon as possible thereafter.
- Students must have their host institution provide an official transcript directly to the AUB Mediterraneo Office of the Registrar.
- Approval of credit transfer is contingent upon achieving a minimum passing grade equivalent to AUB Mediterraneo's C in each course as determined by the Undergraduate Curriculum Committee of the relevant faculty.
- Credits received through Study Abroad Programs will show as pass only on the AUB Mediterraneo transcript.
- The Office of the Registrar keeps a log of accepted grade equivalencies for courses offered by local, regional and international universities to ensure consistent implementation across all majors of the grade equivalence policy for credit transfer.
- For degrees at the Bachelor's level, the essential part-percentage of the studies that must be done at AUB Mediterraneo is at least four semesters of full-time study for four-year study cycles.
- Credit units, that is, transferable to a degree-level program of study in the same or a related subject, from previous studies, must not exceed half the program of study.

UNDERGRADUATE TRANSFER WITHIN THE UNIVERSITY, SAME FACULTY

Students who wish to transfer from one major to another within the same faculty may do so only after completion of at least two full terms of work in their current major. In all cases, they must:

- Complete the transfer form
- Attach grades to the transfer form
- Submit the form to the chairperson of the current department (who will make her/his recommendation to the chairperson of the prospective department)

The chairperson of the prospective department presents the form to the Academic committee/Faculty committee. The decision of the committee is communicated to the student by the faculty.

UNDERGRADUATE TRANSFER FROM ONE FACULTY TO ANOTHER WITHIN THE UNIVERSITY

Students who wish to transfer from one faculty to another must complete the application for <u>transfer form</u>. They must apply within deadlines specified in the <u>university calendar</u>.

DEAN'S HONOR LIST (UNDERGRADUATE ONLY)

To be placed on the dean's honor list at the end of the term, a student must

- Be carrying at least 24 ECTS,
- Have passed all courses and attained an overall average of A⁻ or be ranked in the top 10 percent of the class and have an overall average of B⁺,
- Not be on academic probation
- Not have been subjected to any disciplinary action within the university during the term

PROBATION—UNDERGRADUATE STUDENTS

Placement on Academic Probation

A student is placed on academic probation if the student's overall average is less than 2.0 at the end of the first through fourth regular evaluation terms, or if the term average is less than 2.3 in any subsequent term, excluding the summer term.

The term in which the student is considered to be 'on probation' is the term that immediately

follows the term in which the student has earned the grades leading to that placement.

The first academic evaluation will be done at the end of the second regular term at the university (after a minimum of 48 ECTS including all repeated courses), and afterwards at the end of each subsequent 24 ECTS fall or spring term, including all repeated courses.

Courses/credits taken during a summer term are counted towards the term average of the next regular term. If the number of ECTS taken in any one regular term is less than 24 (for approved reasons), courses/credits taken during that term are counted toward the term average of the next regular term.

Credit for incomplete courses will be included in the term in which the incomplete courses were taken. The evaluation for that term will be carried out as soon as the grades for the incomplete courses have been finalized.

For implementation purposes, the academic standing of a student is represented by two attributes (a, b).

- The first attribute (a) represents the student's current academic status as follows: 0: clear status 1: student is currently on probation but was not on probation in the immediately preceding regular term 2: student is currently on probation and was on probation in the immediately preceding regular term.
- The second attribute (b) represents the probation history of a student, i.e., the number of times the student has been placed on probation.

REMOVAL OF PROBATION

Probation is removed when the student attains a term average of 2.0 or better in the third or fourth regular term or a term average of 2.3 or more in any subsequent regular term. The student is off probation during the term following the one in which such grades are earned.

Probation should be removed within two regular terms, excluding summer, after the student is placed on probation or when the student completes her/his graduation requirements (see Graduation Requirements).

DISMISSAL AND READMISSION

A student may be dismissed from the university for any of the following reasons:

- If the student's overall average is less than 1.0 at the end of the second regular term
- If the student fails to clear academic probation within two regular terms, excluding the summer term, after being put on probation; i.e., the student's academic status is (2,2) or (2,3), and the student has failed to remove the probation
- If the student is placed on academic probation for a total of four regular terms (a student can be dropped for this reason even if s/he is in the final year at AUB); i.e., the student's academic status is (0,3) or (1,3), and the student is again placed on probation;
- If the student is deemed unworthy by the faculty to continue for professional or ethical reasons.

A student is normally considered for readmission only if, after spending a year at another recognized institution of higher education, the student is able to present a satisfactory record and recommendations. Exceptions may be made for students who left the university for personal or health reasons. Transfer of credits is considered after departmental evaluation of a student's coursework.

Undergraduate Graduation Requirements Residency and Total ECTS Requirements

A maximum of six calendar years is allowed for graduation for students who enter as regular first-year students. A student who fails to complete her/his degree program within the specified time frame must petition the Student Academic Affairs Committee for an extension.

A minimum of seven terms of residence is required beginning with year one. For purposes of this requirement, two summer sessions shall be considered equivalent to one term.

Departmental Requirements

The requirements are a minimum of 72 ECTS in the major department in courses numbered 100 or above, of which a minimum of 60 ECTS must be numbered 200 or above. Also, a cumulative average of C+ (2.3) in the major plus any additional requirements set by the department.

Graduation with Distinction and High Distinction—Undergraduate Students Only

To graduate with distinction, a student must:

- have an average of A⁻ (3.7) or higher in all work of her/his final academic terms, including summers: (two summer sessions are equivalent to one term) during which 120 ECTS credits or more have been completed at AUB Mediterraneo
- and be recommended by her/his department for distinction

To graduate with high distinction, a student must:

- have an average of A (4.0) or higher in all work of her/his final academic terms, including summers: (two summer sessions are equivalent to one term) during which 120 ECTS credits or more have been completed at AUB Mediterraneo
- and be recommended by her/his department for high distinction.

For purposes of graduation with distinction or high distinction, when a student repeats a course, all grades enter into the computation of the student's overall average. For transfer students, if the number of credits completed at AUB Mediterraneo is less than 120 ECTS, then the completed credits are used as the measuring criteria.

GRADUATE STUDENTS

The minimum passing grade for a graduate course is C+ (2.3).

Results of tutorial courses, projects, or theses are reported as Pass (P) or No Pass (NP).

Prerequisite courses are undergraduate courses taken to make up for deficiencies in the student's background. The minimum passing grade for a prerequisite course is C+ (2.3). However, a department program may set a higher minimum passing grade.

ATTENDANCE (GRADUATE STUDENTS)

A student who is absent without excuse for more than one third of the number of sessions in any course may be dropped by the instructor of the course.

Leave of Absence (GRADUATE STUDENTS)

All graduate students are expected to make steady and satisfactory progress toward the completion of degrees.

Students who are not enrolled for a period of more than one academic year (two consecutive regular terms and one summer) will be considered to have withdrawn from the program unless they apply for a leave of absence and secure approval from the department, faculty/school Graduate Studies Committee.

The leave of absence application can be up to one academic year at a time. The maximum period of approved leave of absence is for two academic years. An approved leave of absence does not count towards maximum residency. Non-enrollment by the student for one regular term without securing leave of absence will count towards maximum residency.

Students who seek to return without having secured leave of absence approval after a non-enrollment period of more than one academic year must reapply and will be considered for readmission following regular AUB Mediterraneo application/admission procedures. If re-admitted into the same graduate program, then their earlier status as graduate student will count towards maximum residency.

The leave of absence will be approved based on a justified reason that includes documentation/proof submitted, and the time of submission. Acceptable reasons must prevent students from carrying out their graduate studies. Students are strongly advised to consult with their advisors regarding the validity of their reasons.

Normally, students are expected to submit a leave of absence before the start of the term in which the leave begins. On some occasions and with adequate justification, leave of absence may be approved after the beginning of the term.

Students should be granted an automatic reactivation of their academic status through the Registrar Office.

Category of Students (Graduate)

Full-Time Status

Full-time status is defined as the enrollment by the graduate student in the following:

A minimum of 18 non-thesis ECTS during the fall or spring term or Masters students working on thesis

Part-Time Status

Any student who does not fulfill any of the above full-time mentioned conditions.

Course Loads (Graduate)

Normally, the maximum number of credits that may be taken in a regular term is 36. The maximum number of credits that may be taken in the summer session is 18. Normally, a student who wishes to enroll in more than the maximum number of credits must petition the faculty Graduate Studies Committee to obtain permission.

Graduate Level Courses

The minimum passing grade for a graduate course is C+ (2.3) for a master's student.

The minimum grade for a graduate student enrolled in a graduate course is F (0).

Results of tutorial courses are reported as Pass (P) or No Pass (NP) .

Results of comprehensive exams, projects, or theses are reported as in Progress (PR) or Pass (P) or NO Pass (NP).

Prerequisite Courses

Prerequisite courses are undergraduate courses taken to make up for deficiencies in the student's academic background. Prerequisite courses do not carry graduate credit.

The minimum passing grade for a prerequisite course is C+. Departments or programs may set higher minimum passing grades.

RESIDENCE REQUIREMENTS (GRADUATE)

To meet the minimum residence requirements for the master's degree, a student must register and be in residence as a graduate student for at least two terms, that is, either for one term and two summers or for four summers.

All requirements for the master's degree must be completed within a period of eight regular terms after admission to graduate study. Students attending only summer sessions must complete all requirements within a period of six summers after admission to graduate study. Extension beyond the maximum allowed period of study requires approval from the Graduate Studies Committee of the faculty offering the program.

CREDIT TRANSFER (Graduate)

For postgraduates Master's level degrees, the essential part-percentage of the studies to be done at AUB Mediterraneo is two-thirds of the program. The credits that can be transferred to program of Master's level studies in the same or related subject from previous studies, should not exceed the one third of the program.

Master's Degree Program

Graduate courses taken beyond the bachelor's degree requirements at AUB Mediterraneo, or at other recognized institutions, are not transferable for credit toward master's degree requirements, unless the applicant attained a cumulative average of at least B+ (3.3) in the undergraduate courses taken in the major or related field of study. Only graduate courses in which the applicant earned an equivalent grade of B+ (3.3) or above can be transferred. No more than 27 graduate ECTS are transferable provided they are not credits earned by internship, thesis or practicum, and degree minimum residency requirement is maintained.

Transfer from AUB Lebanon to AUB Mediterraneo (Graduate)

For postgraduate studies, the transfer of lessons from programs of the AUB Lebanon, must not exceed 30 ECTS.

From One Master's Degree To Another

Graduate courses taken at AUB Mediterraneo (or at other recognized institutions), in which the applicant earned an equivalent grade of B+ (3.3) or above, may be transferred to another master's degree at AUB-Mediterraneo. No more than 27 ECTS are transferable provided they are not credits earned by an internship, thesis or practicum, and degree minimum residency requirement is maintained. Approval by the department or the academic unit concerned and the faculty Graduate Studies Committee is required for all credit transfers. Normally, credits counted toward another graduate degree at AUB Mediterraneo or another institution cannot be transferred if they have already been used to satisfy requirements for another awarded graduate degree.

Use Of Graduate Transfer Credits In GPA

Credits earned at other institutions or at AUB Mediterraneo beyond the requirements of the bachelor's degree and transferred into the master's program are not included in the calculation of a student's grade average while pursuing a master's degree. Such courses are reported as pass (P). Transfers of credit earned at the master's level or while registered as a graduate not working for a degree from AUB Mediterraneo are not subject to the above limitations but require the recommendation of the department chair and approval of the faculty Graduate Studies Committee.

Change of Major Within Faculty and Interfaculty Transfer (Graduate)

A student enrolled in a master's degree program at AUB Mediterraneo may apply to transfer to another program according to the following procedure:

- Change of major within the same Faculty: The student may apply, following the set deadlines for graduate admissions process, for change of major within the same Faculty by petitioning the department to which s/he is planning to join and securing its approval and the approval of the Faculty Graduate Studies Committee.
- Transfer to other Faculties/Schools from within AUB Mediterraneo: The student should complete a new application to the desired program following the graduate admissions process and deadlines to be considered for admission into the new major.
- Transfer within an interfaculty program: The student should apply to the relevant interfaculty program committee seeking its approval and the approval of the Faculty Graduate Studies Committee of the Faculty to which the student wishes to transfer.

Academic Standing of Students Working for a Master's Degree

The academic performance of the student is first evaluated by the department upon completion of 27 ECTS of coursework after initial enrollment towards the degree and then is evaluated every term/term thereafter. A graduate student is in good standing when her/his graduate cumulative average is B+(3.3) or above. A student must be in good standing in order to be awarded a degree. Students Admitted on Probation

- A student admitted on probation must complete at least 27 ECTS of graduate level courses within the first two terms of graduate studies, must pass all courses, and must attain a minimum cumulative average of 3.3 to achieve regular status.
- If the student fails to meet any of these conditions, s/he will be dropped from the program.

Placing Students on Probation (Graduate)

• A student is placed on probation if s/he attains a cumulative average less than GPA 3.3 after the completion of 27 ECTS, or fails any course taken for graduate credit.

- A student thus placed on probation because of GPA must remove it by the end of the following regular term. This is done by achieving a cumulative average of GPA 3.3.
- A student placed on probation because of course failure must retake and pass the course the next time it is offered. In case this condition cannot be met, the student, in consultation with the advisor, must petition the faculty/school Graduate Studies Committee.

Dismissal (Graduate)

The Faculty/School Graduate Studies Committee may dismiss a master's student, in consultation with the department/program, from graduate study if any of the following conditions arise:

- Cumulative average base probation status is not removed in the term following the first probation, excluding students admitted on probation, see previous section on probation and removal of probation.
- The student is placed on probation for a second time.
- The student achieves a cumulative average of less than 2.3 after completion of 27 ECTS
- The student fails to achieve a passing grade in two courses in one term.
- Outside the first term of study, the student achieves a cumulative average of 2.3 or above but less than 3.3 in any term, and fails to achieve a passing grade in one course in that term.
- The student fails the comprehensive examination or the thesis defense twice.

Master's Degree Graduation Requirements

To be eligible for graduation with a master's degree from the AUB Mediterraneo, a graduate student: must have attained a cumulative course average of B+ (3.3) or above, should not be on probation by the time the coursework is completed,

- must have completed the minimum credit hours of coursework designated by the specific program,
- must have passed the comprehensive exam,
- must have completed thesis requirements for the thesis option degrees,
- must have completed project requirements for the non-thesis option degrees,
- and must have met the residence requirements specified for the master's degree.

Plagiarism

Students who fail to properly credit ideas or materials taken from another commit plagiarism. Putting your name on a piece of work—any part of which is not yours— constitutes plagiarism, unless that piece is clearly marked and the work from which you have borrowed it is fully identified. Plagiarism is a violation of the university's academic regulations and is subject to disciplinary action.

Correct Use of Language

Facility in clear, correct and responsible use of language is a basic requirement for graduation. Papers (term papers, essays or examinations) that are ill-written, no matter what the course, may receive a lower grade for the quality of writing alone. The final grade in any course may be lowered for consistently substandard written or oral expression. In extreme cases, a failing grade may be given for this reason alone. (See the section on English Proficiency above.)

Disclosure of Student Records

Information about notification of rights under U.S.C. 438(6)(4)(8), The Family Educational Rights and Privacy Act of 1974) can be found on the following <u>website</u>.

Graduation

Students are strongly advised to prepare their registration schedules with their advisors to ensure graduation requirements are fulfilled. Failure to do so may mean a student has to spend an additional term or more at AUB Mediterraneo to complete graduation requirements.

Commencement Exercises

Commencement exercises are held at the end of the academic year.

Names on Diplomas and Degrees

Names on diplomas and degrees are spelled exactly as they appear on passports or identity cards and must

be confirmed prior to Senate vote to award the degrees. Once graduated, name spelling cannot be changed.

Passports and Visas

Non-Cypriot students joining AUB Mediterraneo must have valid passports and student visas issued by the Government of Cyprus.

Payment of Fees

All students must finalize registration, including payment of tuition and other charges, by the announced deadlines. Those who do not with be administratively deregistered from their courses.

The American University of Beirut - Mediterraneo is a non-profit institution. Costs to students in tuition and other university fees are kept at a minimum, consistent with the provision of high-quality instruction and adequate facilities and equipment. The university reserves the right to change any or all fees at any time without prior notice. Such changes are applicable to students currently registered at the university as well as to new students.

- Students are not permitted to enter classes at the beginning of the term until their fees are paid or special arrangements have been made with the Office of the Comptroller.
- Each AUB Mediterraneo student must pay all her/his tuition and other university fees.
- Statements of fees are available on the AUB Mediterraneo website.
- All students must complete registration and the payment of tuition fees and other charges according to the academic calendar for the first and second terms. Under special circumstances, late payment is permitted during a period of no more than five working days after the announced deadline and is subject to a late payment fee of €100.
- Students who demonstrate financial need must formally apply to the Office of the Comptroller for deferred payment arrangements for tuition fees by the stated deadline in the academic calendar. Applications for deferrals are not accepted thereafter. Deferred payments are not a right and are only agreed to under specific and special circumstances. Students who arrange for deferred payments are still required to complete all registration formalities within the set deadlines. Deferred payment arrangements are not permitted for the summer session in any faculty.
- All students who apply for deferred payment arrangements must pay at least 50 percent of the net amount of tuition due. All other charges must be paid in full with no deferrals. A student must pay a deferred payment application fee of €33, whether the application is approved or not. Should the student's application be approved, the student must pay the balance of tuition, the deferred application fee of €33, and an interest of 1 percent per month on the deferred amount. All payment must be concluded by the announced deadlines.
- Every student granted deferred payment arrangements must sign a statement indicating agreement that failure to complete payment by the set deadline will result in receiving no credit for the term in which the student has defaulted on payment.
- Due dates are not extended nor are late payment fees waived for any reason.
- Students are expected to meet all financial obligations to the university by the appropriate due date. For any student who fails to promptly meet her/his financial obligations, the university reserves the right to place an encumbrance on the student's record that prevents registration for future terms and the release of transcripts and diplomas, and also prevents access to other university services. It is each student's responsibility to be informed of all registration and fee payment dates and deadlines.

<u>Up-to-date schedules</u> for registration and payment of fees are available through our <u>calender</u>.

Withdrawals

In the event a student withdraws for justifiable reasons after registration, fees are refunded according to the following schedule for the fall and spring terms:

- Before the official start of classes 100% of full tuition and other fees
- During the first week of classes 75% of tuition
- During the second week of classes 50% of tuition
- During the third week of classes 25% of tuition

The following schedule is applied in refunding fees for the summer session:

• Before the official start of classes 100% of full tuition and other fees

- During the first week of classes 75% of tuition
- During the first week of classes 25% of tuition

Financial Aid

Financial aid will be available for qualified students who are accepted and enrolled at AUB Mediterraneo and are in good academic standing. It can be awarded on an annual basis or for the duration of the program depending on the specific type. AUB Mediterraneo reserves the right to modify or cancel awards at any time for the following reasons: changes in financial or academic status, discovery of incorrect or falsified information by the applicant or applicant's family, or errors in the determination of need and eligibility for financial aid. Financial aid can be of different kinds:

- 1. Need based grants
- 2. Merit based grants
- 3. Graduate assistantships
- 4. Donor funded scholarships
- 5. Externally funded grants or loans by student's national government
- 6. Bank loans (forthcoming based on future discussions with local banks

Need-based grants

To be eligible for any grant where financial need is a component, the student must meet the following criteria: Accepted or enrolled at AUB Mediterraneo on a full-time basis, normally 24 ECTS. Graduate students may receive financial aid if they register for at least 18 ETCS.

Must demonstrate financial need as determined by the Interfaculty Financial Aid Committee.

Must be in good academic standing (demonstrate satisfactory academic performance). Need-based grants are available for one degree at each level of study.

Full-time graduate students must apply for graduate/research assistantships at the faculty where they are enrolled. Additionally, they are expected to apply for any externally funded grants or loans for which they are eligible.

Application for need-based grants

Students must complete a financial aid application for the term in which they will begin their studies. Grants are awarded for the summer term only to students who are required by their program to register for summer courses. The applicant and parents are required to submit all form and supporting documents by the deadline.

Interviews may be conducted with the applicant and parents.

Documents required may include, e.g., photograph, official transcripts, employment records for each member of the family, employee income statements, recent school statements and receipts for fees paid for each dependent child, a family civil status record, copies of rental contracts or ownership deeds to all properties, copies of car registration for each car owned by each member of the family, copies of loan agreements with supporting documents, copies of bank statements for every member of the family, all the same documents for the spouse if married, any additional documents that would support the application.

Merit-based grants

Students may be eligible for entrance scholarships and continuing scholarships. An entrance scholarship is awarded to an admitted student in competition with all other admitted students. Entrance scholarships are valid for the first two terms only. A continuing scholarship is awarded to full time status

an admitted student in competition with all other admitted students. Continuing scholarships are valid for the term of the program, provided that the student maintains all eligibility criteria as outlined in this document. There is no application for a merit-based grant. The number of grants available in each category is subject to availability of funds, and students will be notified with their letter of acceptance if they are the recipient of one of these grants.

Graduate Assistantships

Applicants to graduate programs can request consideration for a graduate assistantship by filling appropriate information in the admissions application. Renewal for continuing students should be managed through their department or faculty in line with existing faculty guidelines.

Donor-funded scholarships

All students may apply for donor funded scholarships by searching the database of available opportunities. The application process for each will vary based on the terms of the donor agreement.

Disbursement

All financial aid controlled by AUB Mediterraneo is disbursed by direct credit to the student's account at the beginning of each term. Each external funding source has its own particularities.

Restrictions

Financial aid is not awarded to students who:

- 1. Are registered on a part-time basis.
- 2. Are placed on probation: Allocations will only be renewed when academic probation is removed.
- 3. Are receiving full graduate/research assistantships.
- 4. Submit incorrect or incomplete information in their applications.
- 5. Are not working for a degree.
- 6. Are full-time research assistants.

Financial aid may be cancelled or reduced in the following cases:

- 1. Student withdraws from all registered courses during a term.
- 2. Student is enrolled for less than 24 ECTS at the undergraduate level.
- 3. Student provides incorrect or incomplete information after registration.

OFFICE OF INTERATIONAL PROGRAMS

About Us

The American University of Beirut (AUB) - Mediterraneo Office of International Programs (OIP) is dedicated to fostering internationalization and diversity at AUB Mediterraneo. We believe that international experience is essential to educating global citizen leaders. We strive to provide AUB Mediterraneo students, faculty, and staff with the opportunity to learn and grow in a diverse and stimulating environment.

Our Mission

The AUB Mediterraneo Office of International Programs is committed to empowering our students to become global citizens by providing them with opportunities to:

- Enhance their global perspectives and understanding of diverse cultures.
- Develop cross-cultural competencies and communication skills.
- Expand their academic horizons and explore new fields of study.
- Build networks and relationships with international peers.
- Contribute to a more interconnected and globalized world.

Our Vision

We envision a world where AUB Mediterraneo is a leading center for international education and intercultural exchange. We aspire to:

- Establish AUB Mediterraneo as a hub for international education in the Mediterranean region.
- Develop cross-cultural competencies and communication skills.
- Foster a vibrant and inclusive international community.
- Provide students with a transformative global learning experience.
- Contribute to the development of responsible and informed global citizens.

International Student Services

The AUB Mediterraneo Office of International Programs offers a variety of programs and services to support our international students and partners, including:

- Pre-arrival advice and visa assistance.
- Assistance in obtaining student residence permits and/or following up on transactions at immigration authorities.
- On-site orientation, mentoring, and intercultural activities.
- Language learning opportunities.
- Global community engagement programs.
- Study abroad support.

Visas and Residence Permits

The AUB Mediterraneo Office of International Programs assists international (non-EU/EEA/Swiss) students to obtain residence permits to legally pursue their studies in Cyprus.

All international students must first apply for and receive an entry permit that enables them to enter Cyprus as students. After entering Cyprus, they must register and apply for a residence permit.

EU/EEA/Swiss nationals must proceed in person, **within four months of arriving in Cyprus**, to their district's Unit of the Aliens and Immigration Service of the Police (or the headquarters of the Civil Registry and Migration Department, if they reside in Nicosia District), pay the official fee, and submit the required documents.

Once registered at AUB Mediterraneo, the OIP will assist students to secure their visas for Cyprus. Further information can be found on the AUB Mediterraneo website. In addition, all information about obtaining a residence permit is communicated at the beginning and throughout each term and is posted on the website.

Partnerships

The AUB Mediterraneo Office of International Programs actively collaborates with a network of international partners to expand educational opportunities and strengthen global connections. We seek partnerships with universities, organizations, and institutions worldwide to promote mutual exchange and collaboration in research, education, and cultural initiatives.

AUB Residency Program

Students studying at the American University of Beirut – Mediterraneo will benefit from the university's close ties with the American University of Beirut (AUB) campus in Beirut through student exchanges, faculty exchanges, collaborative academic activities, and community-based projects, and expanded online and hybrid learning opportunities.

All AUB Mediterraneo students will be required to complete a residency period at AUB in Lebanon. This can be done in one of three ways:

- Conduct a community-based and/or civic engagement project in Beirut.
- Complete an internship in Beirut.
- Spend one or two academic terms at the AUB campus in Beirut.

OIP Resources for Faculty

The Office of International Programs provides information for faculty on international standards of practice for credit transfer and grade transfer. In addition, OIP maintains a current listing of institutions/consortia/universities with which AUB Mediterraneo maintains formal institutional agreements for purposes of student, staff, and faculty mobility. Exchange agreements with AUB Mediterraneo must be approved by the rector. Guidelines for setting up new international academic exchange agreements and other institutional relationships are available by request from the director.

FACULTY OF ARTS AND SCIENCES

Institute for the Liberal Arts Mission Statement

The Institute for the Liberal Arts in the Faculty of Arts and Sciences at AUB—Mediterraneo fulfills the university's commitment to the philosophy, standards, and practices of American liberal arts education. The ILA is the academic and administrative home of the program in General Education, a core component the undergraduate experience which expresses the university's unique character as an Anglophone university anchored in the Arab world and operating in a primarily Hellenophone part of Europe. ILA cultivates excellence in teaching and research across a broad range of humanistic and scientific disciplines and encourages active student life on campus. In all its activities, ILA aims to express humane values and an ethic of care that extends from the individual and the campus community to the Mediterranean region and the wider world.

General Education Program

The mission of the General Education program is to help us understand ourselves, the world, and our role in it. The program will allow students learn to think critically and analyze intellectual and social issues in their historical and contemporary frameworks from a variety of disciplinary perspectives. It does so while also enhancing problem-solving skills and abilities for life-long learning. Students will recognize and reflect on their values, their civic responsibilities and their general roles in society.

- After completing the General Education Program, students will be able to:
- Demonstrate intellectual independence in pursuit of knowledge.
- Make informed and logical arguments through critical thinking abilities.
- Reflect on one's values.
- Contribute effectively to the community.
- Critically reflect on one's own transformative university experience

COURSES AND COURSE DESCRIPTIONS

Understanding Our Communication

ARAB 100 Beginners' Arabic as a Foreign Language I

This course introduces students who have no previous knowledge of Arabic to the Arabic language and culture within its Lebanese setting. The course utilizes an integrated approach to Arabic and emphasizes communicative tasks and contexts. By the end of the course, students will be able to speak and write simple connected sentences about themselves, their families and their immediate environment, and read and listen to short authentic texts.

ARAB 101 Beginners' Arabic as a Foreign Language II

A continuation of ARAB 203. By the end of this course, students reach Intermediate-Low to Intermediate-Mid proficiency in Arabic on the ACTFL scale. Prerequisite: ARAB 100 or placement after testing.

ENGL 100 Academic English

A course designed to develop critical thinking, reading, and writing at the undergraduate level. Students compose essays based on their analysis of and response to thematic articles presented in class.

ENGL 101 Advanced Academic English

A course designed to provide rigorous training in reading comprehension, synthesis, critiquing, and research skills. Although ENGL 204 builds on many of the skills learned in ENGL 203, it differs in that it encourages more advanced independent research as well as writing and discussion in relation to a variety of issues across the curriculum. Prerequisite: ENGL 100. This course does not count toward graduation for students in Faculty of Engineering.

ENGL 102 Technical English

A course that introduces students to English used for communication in technical fields. This course focuses on reading, writing, oral communication activities, and preparation and presentation of technical reports. Prerequisite: ENGL 100. For students in Faculty of Engineering only.

Our Quantitative Reasoning

MATH 100 Calculus and Analytic Geometry III

Sequences and series, Taylor approximation, Multivariable functions, partial derivatives, multiple integrals, cylindrical and spherical coordinates, and integration along curves.

MATH 101 Differential Equations

Integration of vector fields along curves and on surfaces, Green's theorem, Stokes's theorem, divergence theorem; first-order differential equations, linear differential equations, series solutions, Bessel's and Legendre's functions, the Laplace transform, and systems of differential equations. Prereauisite: MATH 100

MATH 102 Mathematics for Social Sciences I

Mathematical notations and basic notions; properties of real numbers; factoring polynomials; functions and their graphs; straight lines and parabolas and their equations; Gaussian elimination; exponential and logarithmic functions; limits and continuity; basic differential calculus. Not open to students with prior credit in MATH 100.

MATH 103 Mathematics for Social Sciences II

Matrix operations, inverses and determinants; elementary combinatorics; introduction to probability; random variables; binomial, normal and Poisson distributions; basic integral calculus; introduction to differential equations; partial derivatives and extremal points of multivariable functions. Prerequisite: MATH 102.

MATH 201 Elementary Linear Algebra with Applications

An introduction to linear algebra at a less theoretical level than MATH 202. Systems of linear equations and Gaussian elimination, vectors in Rn, matrices, determinants, vector spaces, subspaces and dimension, orthogonal projection and least-squares approximation, eigenvalues, eigenvectors, and selected applications. Students cannot receive credit for both MATH 202 and MATH 201.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 FCTS

6 ECTS

6 ECTS

6 ECTS

MATH 202 Linear Algebra I

A rigorous introduction to linear algebra, with emphasis on proof and conceptual reasoning. Vector spaces, linear transformations and their matrix representation, linear independence, bases and dimension, ranknullity, systems of linear equations, brief discussion of inner products, projections, orthonormal bases, change of basis, determinants, eigenvalues, eigenvectors, and spectral theorem. Students cannot receive credit for both MATH 202 and MATH 201.

MATH 203 Numerical Computing

Computer number representations and round-off errors; Basic techniques in numerical analysis: root finding; Gauss elimination and PLU decomposition; polynomial and spline interpolation; differentiation and integration, Richardson extrapolation; solving initial value problems for ordinary differential equations and systems of differential equations. Implementations and analysis of algorithms are stressed. Projects using MATLAB or similar tools are assigned. Prerequisites: CMPS 100 or CMPS 101, and MATH 100. Prerequisite or Co-requisite: MATH 201. Students cannot receive credit for both MATH 203 and CMPS 351

STAT 100 Elementary Statistics for the Social Sciences

Data organization and frequency distributions; measures of central tendency and dispersion; probability and random variables; binomial and normal distributions; estimation, and hypothesis testing.

STAT 101 Introduction to Probability and Random Variables

Display of data, properties of probability, methods of enumeration, conditional probability and independent events; univariate and bivariate distributions corresponding to both discrete and continuous variables; mixture of distributions; covariance and correlation, independent random samples and the central limit theorem; basics of point and interval estimation and hypothesis testing. Prerequisite: MATH 100. Students who complete STAT 101 cannot receive credit for STAT 100.

CMPS 101 Introduction to Programming

This course introduces students to programming and computational thinking. A high-level programming language is used. Students will learn the principles of imperative and object-oriented programming in addition to basic data types, flow control (repetition and selection constructs), procedures and functions, parameter passing, scoping, recursion, arrays, and classes. Students are briefly introduced to simple algorithms and data structures.

CMPS 108 Computing for Business

This course introduces Excel as a computer tool to plan, create, and use spreadsheets to formulate and solve business problems. It exposes students to a wide coverage of spreadsheet topics from introductory concepts such as problem formulation, writing formulas and functions, charting, grouping, and error prevention to more powerful and advanced features such as pivot tables, and analysis needed in decisionmaking. In addition, it boosts students' ability to collect, analyze, and forecast business and financial data to generate valuable insights. The course offers students an opportunity to apply skills in a laboratory environment in which they can experiment using Excel business problems designed for some selected topics. It provides the tools to perform modeling, calculations, analysis of various phenomena encountered in other courses such as finance, operations management, human resources, etc.

CMPS 111 Discrete Structures

This course introduces students to discrete structures, focusing on those relevant to computing sciences. Topics covered include Logic and Proofs, Sets, Sequences, Functions, Growth of Functions, Algorithms and their complexities, Induction and Recursion, Counting, and Recurrence Relations. Everv term.

Understanding the World

BIOL 100 General Biology I

An integrated approach to the biology of organisms covering the organization of life, energy transfer through living systems, perpetuation of life, and diversity of life.

BIOL 101 Human Biology

A course that covers the fundamental principles of cell biology, genetics, and human biology, with emphasis on the morphology, physiology, and disorder of body systems.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

CHEM 100 Chemical Principles

A theoretical introduction to chemical principles, stressing atomic structure, bonding, stoichiometry, gases, solutions, acids and bases, solution equilibria.

CHEM 101 Introduction to Environmental Chemistry

An introduction to the fundamentals of physical, inorganic, and organic chemistry, with applications to environmental problems. This course surveys atomic and molecular structure, solutions, equilibrium, acids and bases, oxidation-reduction, reaction kinetics with emphasis on mechanisms of organic free radical reactions, and basic radioactivity.

CHEM 102 Introductory Chemical Techniques

A laboratory course on the methods of quantitative analysis, physical chemistry measurements, and inorganic semi-micro qualitative analysis, with applications to environmental problems. Pre- or corequisite: CHEM 100 or CHEM 101.

CHEM 301 Organic Chemistry I

An introduction to organic chemistry organized according to functional groups. This course covers synthesis, properties, and reactions of aliphatic and aromatic hydrocarbons and alkyl halides, with emphasis on mechanistic and stereochemical aspects of organic reactions. Designed for chemistry majors and premedical study. Prerequisite: CHEM 100. Each semester.

CHEM 302 Organic Chemistry II

Synthesis, properties, and reactions of organic functional groups, including alcohols and ethers, aldehydes and ketones, carboxylic acids and derivatives, amines, phenols, and aryl halides; chemistry

of difunctional compounds and of molecules of biological importance, including carbohydrates, proteins, and nucleic acids; and organic structure determination by spectroscopic methods. Emphasis is placed on reaction mechanism and stereochemistry, as well as on the design of multi- step syntheses. Designed for chemistry majors and premedical study. Prerequisite: CHEM 301. Each semester

HPCH 100 Introduction to Public Health

An introductory course intended to introduce undergraduate students to the basic concepts, disciplines, principles of public health, and how public health functions and integrates other professions. Students learn how to link biological, physical and socio- political factors to health and illness, situated at individual, community, institutional and global levels through interactive lectures and consequent application sessions. Examples and case studies of contemporary health challenges and interventions from the world and particularly the Arab region will be used.

PHYS 100 Introductory Physics II

Review of classical mechanics, fluid statics, fluid dynamics, temperature, heat and first law of thermodynamics, kinetic theory of gases, heat engines, entropy and second law of thermodynamics, general properties of waves, sound waves and resonances, light and optics, interference, diffraction, and polarization. Pre- or corequisite: MATH 100.

PHYS 101 Introduction to Classical Physics

Solids and fluids, thermal physics and processes, heat and heat engines, the laws of thermodynamics, gas dynamics, vibrations and wave phenomena, sound, reflection and refraction of light, mirrors and lenses, wave optics and optical instruments. Annually.

PHYS 102 Introduction to modern physics

Part I: Electric field, electric potential Gauss's law, capacitance, electric current and circuits and Ohm's law. Magnetic field, Ampere's law, electromagnetic induction, electromagnetism applied to biological systems. Part II: Introduction to relativity, atoms and atomic structure, nuclei, elementary particles and radioactivity. Annually

PHYS 103 Introductory Physics Laboratory II

Error analysis, Atwood's Machine and motion down an incline, conservation of Mechanical energy, surface tension and viscosity, thermal expansion of solids, mechanical equivalent of heat, standing waves on a stretched string, standing waves in air columns, interference and diffraction, the spectrometer, Michelson interferometer. Pre- or corequisite: PHYS 100.

Understanding Our Cultures and Histories

CHLA 101 Ancient Near East and Classical Civilizations

An introduction to fundamental elements of Ancient Mesopotamian, Greek, and Roman world views that continue to influence us today. Starting with the Epic of Gilgamesh, the course moves on to explore the Greek and Roman worlds through epic, drama, history, and philosophy, in some of the most influential texts from that period of human history.

CHLA 102 Medieval, Islamic, and Renaissance Civilizations

An introduction to fundamental elements of late Classical, Medieval, Islamic, and Renaissance worldviews that continue to influence us today. This course focuses particularly on Christian and Islamic thought as presented in texts such as those of Augustine, Al Ghazali, Ibn Tufayl, Ibn Rushd, Aguinas, Dante, Ibn Khaldun, and Luther. Selected texts from the Renaissance period round off the course.

CHLA 103 Enlightenment and Modernity

An introduction to fundamental elements of what has come to be termed the epochs of Modernity and the Enlightenment. This course explores the emerging elements of an age of exploration, scientific advancement, and radical new ideas, through selections from authors such as Shakespeare (The Tempest), Bacon, Descartes, Hobbes, Locke, Hume, Adam Smith, Diderot, Bentham, Kant, Goethe, Shelley, Marx, and Mill.

CHLA 104 Contemporary Studies

An introduction to some of the most seminal influences in thought that have shaped our contemporary world from the late 19th century to the present time. This course typically explores themes and developments such as evolutionary theory, Nietzschean radical critique, depth-psychology, astrophysics, philosophy of science, revolution, the absurd, existentialism, gender issues, and postcolonial literature and criticism, from both the Western and the Arab worlds.

CHLA 105 Ancient, Medieval, and Renaissance Civilizations (Thematic)

Individualized courses designed to explore the periods covered in CVSP 201 and 202, utilizing a thematic approach. Examples of themes that will be explored include: Epics: Text and Context; Human Nature: Ancient, Medieval and Renaissance texts; Love: Human and Divine; Religion as Text and Tradition; Utopian Thought. May be repeated for credit on different topics.

CHLA 107 Modern and Contemporary Studies (Thematic)

Individualized courses designed to explore the periods covered in CHILA 101 and CHLA 104, utilizing a thematic approach. Examples of themes: Epics: Text and Context; Faith, Culture, and Modernity; Folly; Four Theories that Shaped the Twentieth Century; Gender and Cultural Production; Human Nature: Modern and Contemporary; Language, Imagination, and Poetry; Love in the Modern and Contemporary Worlds; Monstrosities in European Modernity; Science and Society; Utopian Thought. May be repeated for credit on different topics. Prerequisite: Any Sequence I course.

ENGL 103 Shakespeare

A course that covers representative plays by Shakespeare, with attention to form, cultural context, and theatrical practice. Attention may be given to Shakespeare's poetry, adaptation and reception, and Mediterranean connections. Readings may vary from term to term. Prerequisite: ENGL 100.

ENGL 104 The Iliad

In this course students study the Iliad in its entirety, in conjunction with representative critical and creative responses. Attention is given to the mythological, linguistic, poetic, and material backgrounds to Greek epic and the role of Homeric poetry in later Greek and world culture. Prerequisite: ENGL 100.

HIST 100 History of the Arab East and Egypt Since 1920

The course focuses on the establishment of the mandate system, and other types of western control in the region, the struggle for Arab independence and the foundation of the post-colonial interventionist state.

PHIL 100 Political Philosophy

An examination of the main issues of political philosophy, such as political obligation, justice, political rights, and other issues. Students cannot receive credit for both PHIL 100 and PSPA 200. Alternate years

6 ECTS

6 ECTS

6 FCTS

6 ECTS

PHIL 101 History of Ancient and Medieval Philosophy

A survey of ancient and medieval philosophy from the pre-Socratics to Aquinas.

PHIL 102 Introduction to philosophy

An introduction to philosophy and its methods through an analysis of traditional issues in ethics, epistemology, metaphysics, and the philosophy of religion. Each semester

PHIL 130 Ethics

An introduction to some of the major normative ethical theories based on the study of the original writings of selected philosophers, including a section on applied ethics. Each semester

PSPA 200 Introduction to political thought

An introduction to the main Western and Islamic traditions in political philosophy and political theory. This course will count as a humanities, not a social science course. Students cannot receive credit for both PSPA 200 and PHIL 100. Each semester.

Understanding Societies and Individuals

QUAL 110 Qualitative Research Methods in Social/Political Sciences and Humanities

The course introduces qualitative research methods commonly used in the Social-Political Sciences and Humanities. A wide range of gualitative methods will be covered in the course and students will then be able to apply these to specific disciplines. Topics covered in the course include: concept and research question formation, research strategies and tools, such as literature review, textual analysis, interviewing, participant observation and ethnographic research, content/discourse analysis, oral history and biography, archival research, as well as issues of research funding, visualization and the politics and ethics of qualitative research.

ECON 100 Survey of economics

Elementary principles of microeconomics and macroeconomics and applications. No credit is given for students majoring in economics. Students cannot receive credit for both ECON 100 and ECON 101-ECON 102. Each semester.

ECON 101 Principles of Microeconomics

General principles of microeconomics; includes elements of supply and demand, consumer behavior, costs, market structures, and income distribution. Students cannot receive credit for both ECON 100 and ECON 101. Each semester

ECON 102 Principles of Macroeconomics

General principles of macroeconomics; aggregate supply and demand framework is used to analyze overall movements in prices and national output, inflation and unemployment, and monetary and fiscal policies. Students cannot receive credit for both ECON 100 and ECON 102. Each semester.

PHPE 100 Introduction to PPE

6 ECTS Introduction to PPE is the first gateway course students take. It combines all PPE disciplines and should be taught by at least two faculty members from distinct disciplines. In this course students are introduced to the emergence of the social sciences from philosophy in the 19th century and how they forged their identities in the 20th century. As each discipline has established its boundaries, we bring them back together in the PPE degree. The recent re-emergent interest in the benefits of interdisciplinarity, in how the three disciplines can complement each other working in pairs or as triples, in both theoretical and applied work, will cover a significant portion of the course. The course also introduces the history of the PPE degree and the varied career paths it offers its holders.

PHPE 200 Economic justice

This course introduces and examines different conceptions of economic justice. It looks closely at different answers that contemporary philosophers and economists give to the question: How and on what grounds should economic benefits and burdens be distributed? The aim of the course is to deepen the students' understanding of debates, issues, and distinctions related to economic justice. It equally aims at developing and sharpening students' powers of critical thinking and analysis.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

PHPE 201 Conflict / Peace / Justice

This course introduces and examines different phenomena of war, conflict, peace and conflict resolution from the perspective of politics and philosophy. It explores the different conceptions of violence in contemporary societies and approaches violence as a political, philosophical and epistemological issue. The aim of the course is to deepen the students' understanding of debates, issues, and distinctions related to conflict, peace and violence. It equally aims at developing and sharpening students' powers of critical thinking and analysis.

PHPE 300 Political Economy

This course starts from the premise that a long-term view of production, power and social change is essential for understanding enduring patterns of wealth and poverty in the contemporary world. By emphasizing the historical and ecological specificity of the infrastructures of social power inherited from the agrarian past, the course tries to highlight the pitfalls of deploying models based on European example for understanding development and social change in other parts of the globe.

PSPA 100 Introduction to Politics

An introduction to the study of politics with emphasis on the basic concepts, ideas, and issues relating to the process of government in the modern state. Each semester.

PSPA 101 International Politics

A survey of the basic forces and factors determining relations among states, with special emphasis on the international system, foreign policy, national power, the restraints on determinants of state action, contemporary problems and major issues faced by states, and the patterns of interaction that prevail among states. Each semester.

PSYC 101 Introduction to Psychology

A survey of the principles and findings of modern psychological science. Emphasis is placed on critically examining empirical research investigating human behavior and mental processes.

Understanding Our Role in the World

CECS 200 Community-based Learning

This course provides students with a community-based learning experience conducted in the form of a tutorial. The student is supervised by a faculty member to conduct a project that identifies a need in the community and develops an approach to address that need. Supervised projects can be completed over the course of a whole regular semester or in a more condensed format during the winter or summer terms.

Department of Computer Science

Mission Statement

The Department of Computer Science at the American University of Beirut prepares students for advanced studies and professional careers in the dynamically changing world of computing and information technology. Our program combines the theoretical foundations of computing with the practical knowledge of software development vital to industry, to provide broad and integrated curriculums.

The department offers a Bachelor of Science (BS) degree in computer science, designed to be completed typically in four years.

The department has vigorous research programs in graphics and multimedia, networking and security, machine learning and data science, high-performance computing, data mining and information retrieval, and software engineering. Our faculty members are committed to contributing to the advancement of the field of computing through scholarly activities, in which our students play a vital role.

Bachelor of Science in Computer Science

The Bachelor of Science program aims at imparting graduates with a solid foundation in computing at both the theoretical and practical levels, thus conferring the ability to design, build, and deploy sophisticated systems using state-of-the-art technologies in a broad array of areas. It also develops an appreciation of the transformative impact that computing has had on a wide variety of disciplines. Students are trained in quantitative reasoning, the use of fundamental principles and ideas (abstraction, modularity, data structures, algorithmic, computability, calculus, and logic) for analysis and problem solving, and disciplined development of modern software systems. The BS program adheres to ACM's (Association of Computing Machinery) standards for knowledge areas learning outcomes.

Degree Requirements

To graduate with a Bachelor of Science in computer science, a student must complete the following requirements:

University General Education Requirements

The General Education requirements are the following:

Major Requirements

Computer science: CMPS 101, CMPS 102, CMPS 111, CMPS 214, CMPS 315, 361 CMPS 221, CMPS 231, CMPS 340, CMPS 342, CMPS 244, CMPS 361, CMPS 270, CMPS 271, CMPS 490 and 42 additional ECTS in computer science courses numbered 214 and above.

Technical electives: 6 ECTS to be chosen from the following:

CMPS elective numbered 214 or above, PSYC 322, PSYC 329, Mathematics: MATH 100 (Calculus III), MATH 201 (Linear Algebra and Differential Equations), STAT 101 (Probability & Statistics)

All prospective computer science majors are expected to complete CMPS 101, CMPS 102, CMPS 111, and Math 201 in the first year. Computer science majors are expected to maintain an average grade of at least 2.2 in computer science courses. Students must have a grade of at least C+ in CMPS 101, and a grade of at least C+ in CMPS 102 before they are allowed to enroll in most CMPS courses.

Sample Study Plan for BS

A typical study plan could have the following distribution of CS courses:

First Year

- Fall term: CMPS 101, CMPS 111, ENG 100, GE •
- Spring term: CMPS 102, CS Elective, MATH 201, ENG 101, GE

Second Year

- Fall term: CMPS 214, CMPS 221, CMPS 270, MATH 100, GE
- Spring term: CMPS 231, CMPS 244, CMPS 271, STAT 101, GE

Third Year

- Fall term: CMPS 315, CMPS 340, CMPS 361, GE, GE
- Spring term: CMPS 342, CS elective, CS elective, GE, GE

Fourth Year

- Fall term: CMPS 490, CS elective, CS elective, GE, GE
- Spring term: CS elective, CS elective, TECH elective, GE, GE

Courses and Course Descriptions

CMPS 101 Introduction to Programming

This course introduces students to programming and computational thinking. A high-level programming language is used. Students will learn the principles of imperative and object-oriented programming in addition to basic data types, flow control (repetition and selection constructs), procedures and functions, parameter passing, scoping, recursion, arrays, and classes. Students are briefly introduced to simple algorithms and data structures.

CMPS 102 Intermediate Programming with Data Structures

This course consolidates algorithm design and programming techniques, with an emphasis on abstract data types. The course introduces students to the design, analysis, and implementation of data structures as well as some of the key algorithms operating them. Topics include lists, stacks, queues, deques, sets/maps, search trees (binary search trees and AVL trees), heaps/priority gueues (heap sort), hash tables, and graphs (breadth-first search and depth-first search). Prerequisite: a grade of at least C+ in CMPS 101. Every term.

CMPS 103 Programming for Everyone

This course is designed for students with no prior exposure to computer science or programming. It aims to help students, regardless of their major, to feel justifiably confident of their ability to write small programs that allow them to accomplish useful goals. To this end, it provides students with a brief introduction to many topics in computer science so they will have an idea of what is possible when they need to think about how to use computation to accomplish some goals later in their career. The course will use the Python programming language. Not open to computer science students.

CMPS 108 Computing for Business

This course introduces Excel as a computer tool to plan, create, and use spreadsheets to formulate and solve business problems. It exposes students to a wide coverage of spreadsheet topics from introductory concepts such as problem formulation, writing formulas and functions, charting, grouping, and error prevention to more powerful and advanced features such as pivot tables, and analysis needed in decisionmaking. In addition, it boosts students' ability to collect, analyze, and forecast business and financial data to generate valuable insights. The course offers students an opportunity to apply skills in a laboratory environment in which they can experiment using Excel business problems designed for some selected topics. It provides the tools to perform modeling, calculations, analysis of various phenomena encountered in other courses such as finance, operations management, human resources, etc.

CMPS 111 Discrete Structures

This course introduces students to discrete structures, focusing on those relevant to computing sciences.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

Topics covered include Logic and Proofs, Sets, Sequences, Functions, Growth of Functions, Algorithms and their complexities, Induction and Recursion, Counting, and Recurrence Relations. Every term.

CMPS 214 Algorithms and Data Structures

This course introduces systematic methods for the design and (asymptotic) analysis of advanced algorithms and data structures. Topics include searching, sorting, order statistics, divide-and- conquer, greedy algorithms, dynamic programming, multi- threaded algorithms, matrix algorithms, as well as (advanced) graph algorithms. Several data structures are also studied such as red-black trees, binomial heaps, Fibonacci heaps, and suffix trees. Prerequisites: CMPS 111 and a grade of at least C+ in CMPS 102. Annually.

CMPS 221 Computer Organization and Design

This course covers the fundamentals of computer architecture with a focus on single- core processor design. Topics include: digital logic design, combinational and sequential logic, hardware for computer arithmetic, floating point arithmetic, assembly programming, instruction set architecture, Datapath design, pipelining and pipeline hazards, memory organization, cache design, and virtual memory. Prerequisites: CMPS 111 and a grade of at least C+ in CMPS 102. Annually.

CMPS 231 Programming Languages

This course covers the fundamentals of programming language design and implementation. The course introduces functional programming and examines the language design principles underlying functional, imperative, and object-oriented languages. Type systems are also introduced. The course also covers the initial stages of programming language implementation, including lexing, parsing, and semantic analysis. Prerequisite: a grade of at least C+ in CMPS 102. Annually.

CMPS 243 Computer and Information Security

This course introduces students to the world of information and computer security. Students will be exposed to various security vulnerabilities of computing and networking systems and learn their fundamental aspects such as cryptography, user authentication, access control principles, trusted computing & multilevel Security, database security, SQL injection attacks, malicious software, worms, malwares, viruses, denial-of-service attacks, intrusion detection and prevention systems, firewalls etc. Also, other topics related to operating system security, web security, wireless security, and Internet security are covered as time permits. The course will examine causes of security breaches and give methods to help prevent them. Prerequisite: a grade of at least C+ in CMPS 102 and senior standing.

CMPS 244 Database System

This course covers the fundamental concepts of database systems. Topics include data modeling using the Entity-Relationship model and the Relation model; query languages including relational algebra and SQL; File Organization and Indexing; Normalization; database programming; and noSQL databases. The course is offered in blended-format and includes a term project. Prerequisite: a grade of at least C+ in CMPS 101 and junior standing. Annually.

CMPS 270 Software Construction

Software Construction provides methods, tools and techniques to develop, modify and maintain complex and efficient software systems. Topics include object-oriented design; specifications and invariants; abstract data types, testing, design patterns, concurrency; version control and event driven programming. Prerequisite: a grade of at least C+ in CMPS 102.

CMPS 271 Software Engineering

This course introduces practical industry-standard software engineering best practices to students that have already written moderate sized software. Students are exposed to full development lifecycle methodologies, choosing the right SDLC, requirements management, software design, design patterns, testing. A group term project provides a holistic hands-on experience building an end-to-end software application using agile principles and emulating a real-world environment often for real clients with real needs. Other topics covered include working in a team, professionalism, project management, and ethics. Prerequisite: CMPS 270. Annually.

CMPS 315 Theory of Computation

A course that covers basics of automata and language theory, computation theory, and complexity theory. Topics include regular expressions, finite automata, context-free grammars and parsing, push down automata, closure properties, Turing machines, Church's thesis, reductions and decidability, time complexity

and NP-completeness, space complexity, polynomial-space and log- space computations, circuit complexity, probabilistic computations and complexity classes, approximation algorithms, and selected topics as time permits. *Prerequisites:* CMPS 214. *Annually.*

CMPS 324 GPU Computing

This course covers parallel computing in the context of processors with many computational cores, with particular emphasis on data parallelism and general-purpose GPU programming. The course introduces the CUDA programming model as well as the GPU architecture and memory organization. The course then covers mapping algorithms to parallel hardware and common optimizations for parallel code using numerous parallel patterns and applications case studies, such as: vector addition, matrix multiplication, convolution, stencil computation, histogram, reduction, prefix-sum, ordered merge, sorting, sparse matrix computation, graph traversal, and others. The course also covers a selection of advanced parallel programming practices. *Prerequisites: CMPS 221.* **Annually**.

CMPS 332 Compiler Construction

This course covers the design and implementation of optimizing compilers starting from source code representation down to machine code. Topics include intermediate representations, linkage and storage conventions, intermediate code generation for imperative and object-oriented languages with polymorphism, global dataflow analysis and the iterative dataflow algorithm, local and global optimizations, backend code generation, and register allocation. *Prerequisites: CMPS 221 and CMPS 231.* **Annually**.

CMPS 340 Operating Systems

This course provides an introduction to the fundamentals of operating system function, design, and implementation. It contains a theory component illustrating the concepts and principles that underlie modern operating systems and a practice component to relate theoretical principles with operating system implementation. The course is divided into three major parts. The first part of the course discusses concurrency (processes, threads, scheduling, synchronization, and deadlocks). The second part of the course discusses memory management (memory management strategies and virtual memory management). The third part of the course concerns file systems, including topics such as secondary storage systems and I/O systems. If time permits, the following topics will be briefly examined: Virtualization, security, distributed synchronization, and perhaps other topics. A case study of a contemporary operating system like UNIX accompanies the course. *Prerequisite: CMPS 221. Annually*.

CMPS 341 Systems and Network Programming

This course focuses on the programming aspects of networking protocols. Topics include: designing and building programming applications that use computer networks, fundamental concepts required to build iterative and concurrent client/server networking applications using sockets. Then it moves to explain low level networking programing and other advanced socket topics. The course also presents the emerging peer-to-peer computing along with some tools needed to develop P2P applications. *Prerequisite: CMPS 340. Annually.*

CMPS 342 Computer Networks

An introduction to network architectures and protocols, placing emphasis on Internet design principles and methodology. Specific topics include application layer protocols, network programming, transport protocols, circuit switching and packet switching, routing algorithms, multicast, local and wide area networks, error detection and correction, and performance evaluation. *Prerequisite:* CMPS 221. *Annually*.

CMPS 351 Numerical Computing

Techniques of numerical analysis: number representations and round-off errors, root finding, approximation of functions, integration, solving initial value problems, Monte-Carlo methods. Implementations and analysis of the algorithms are stressed. Projects using MATLAB or a similar tool are assigned. *Prerequisites: a grade of at least C+ in CMPS 101, and MATH 100. Annually.*

CMPS 361 Machine Learning

This course covers Machine Learning theory, algorithms, and applications. Machine Learning is currently at the heart of Artificial Intelligence. It enables computational systems to adaptively improve their performance with experience accumulated from the observed data. This course balances theory and practice and covers the mathematical as well as the heuristic aspects. It also covers the latest trends in Machine Learning such as deep learning. *Prerequisites:* a grade of at least C+ in CMPS 101, STAT 101, and MATH 201.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

CMPS 362 Data Science

This course introduces foundational elements comprising the data science pipeline. It covers techniques in data acquisition, cleaning, and preparation for machine learning, basic applied machine learning techniques spanning distance-based algorithms, rule based algorithms, and black box algorithms, basic statistics for machine learning (descriptive, inferential, and estimation statistics), basic time series analysis and forecasting techniques, data production techniques using knitr and rmarkdown, and machine learning interpretability using SHAP. The course is delivered using both the R and Python programming languages. *Prerequisites: a grade of at least C+ in CMPS 101, STAT 101.*

CMPS 375 Mobile Application Development

This course introduces to students the world of mobile applications development from a software engineering perspective. Students will learn the importance of a good design for a mobile application, in addition to being able to write a basic to intermediate mobile application. The course includes many software designs patterns and user interface design patterns. Students will learn how to collect, store, and present data in a mobile application, in addition to using the different exciting features of a mobile such as locations, graphics, cameras, and other features. *Prerequisite: a grade of at least C+ in CMPS 102. Annually.*

CMPS 378 Web Programming and Design

This course introduces the fundamentals needed to program on the Internet as well as the state-of-the-art technologies used in designing and developing rich multi-tiered web-based applications. It presents the basics of client-side/server-side web programming and the skills and tools needed to create dynamic Web-based applications. It provides in-depth coverage of various markup languages and their associated cascading style sheets, several client side and server-side scripting languages (such as PHP and JavaScript, Angular, and Nodes) in addition to AJAX-enabled rich Internet applications, client-side technologies, web services, Web Servers, and multi- tiered applications using relational database systems. *Prerequisite: a grade of at least C+ in CMPS 102.*

CMPS 380 Digital Media Programming

The class is an introduction to digital media programming and processing. The course explains the essential technology behind images, animations, sound, and video and illustrates how to write interactive programs that manipulate these media in creative ways. The class assumes basic knowledge in Java or a first course in programming. *Prerequisite*: a grade of at least C+ in CMPS 101.

CMPS 382 Game Programming

This course introduces students to game programming using state of the art technologies. The course covers both theoretical backgrounds and implementation details of different components of games. Topics covered will be the physical control of a game character, interactions between objects, inventory, HUD, and Al. *Prerequisite:* a grade of at least C+ in CMPS 102. *Annually*.

CMPS 416 Algorithmic Graph Theory

This course explores algorithmic graph theory by visiting some of its core theorems, key problems, and efficient algorithms and tools. The main goal is to systematically present essential results for the design of graph algorithms. Mathematical properties of graphs will be used in developing new algorithms and showing that these algorithms work correctly and efficiently. The course assumes no prior knowledge of graphs but requires that students have "mathematical maturity" (e.g., are comfortable with proofs and abstract reasoning). Some of the topics that will be covered include fundamentals of graphs, connectivity, matching, covering, planarity, sparsity, coloring, and network flows. *Prerequisites: CMPS 214. Annually.*

CMPS 417 Advanced Design and Analysis of Algorithms

This course studies advanced data structures and algorithms, with an emphasis on the design of efficient algorithms. It surveys many of the techniques that apply broadly in the design of efficient algorithms, and studies their application in a wide range of domains and computational models. The goal is for the class to be broad rather than deep and to touch upon the following areas: data structures, bit tricks, string algorithms, maximum flows, linear programming, online algorithms, approximation algorithms, fixed-parameter algorithms, parallel algorithms, external-memory algorithms, computational geometry, and streaming algorithms. This is a tentative list of topics that might be covered; some material will be selected adaptively based on the background, interests, and rate of progress of the students. *Prerequisites: CMPS 315. Annually.*

CMPS 445 Information Retrieval and Web Search

This course introduces graduate-level students to the basics of information retrieval, and the models and algorithms underlying modern search engines. Topics covered include: crawling; indexing; Boolean and vector space retrieval models; probabilistic information retrieval models; language models; top-k query processing; evaluation of information retrieval systems; relevance feedback; link analysis; latent semantic analysis; and information extraction. *Prerequisite*: Senior standing. Annually.

CMPS 446 Distributed Systems

A distributed system consists of a set of nodes located at networked computers and communicate only bypassing messages. This course provides techniques to abstract, design and implement efficient, scalable, and fault-tolerant distributed systems. Topics include, but not limited to, inter- process communication, distributed synchronization and consensus (e.g., paxos, blockchain), fault-tolerance, distributed file systems (e.g., HDFS), and Hadoop ecosystem. Prerequisite: CMPS 340. Annually.

CMPS 447 Advanced Networking Topics

This course focuses on the current, advanced, and emerging topics in networking. It aims to make the students familiar with the state of the art in networking topics and enhance their skills in network programming and simulations. Lectures will cover topics that include but not limited to socket programming, multicasting, quality of service, IPv6 based networks, Voice Over IP and Internet telephony, software defined networks, network function virtualization, data centers, wireless and mobile networking architectures and technologies (MANET, LTE, 5G). Due to time limitations, some topics might be covered through student presentations. Prerequisite: CMPS 342. Annually.

CMPS 463 Advanced Machine Learning

This course focuses on Deep Learning and its applications. Deep Learning has revolutionized the field of Machine Learning and has turned Artificial Intelligence from a research endeavor into an actual reality. In this course, you will learn about the fundamentals of Deep learning, and how to build Deep Learning models for various real-world applications, particularly in Computer Vision and Natural Language Processing. Prerequisites: CMPS 361.

CMPS 472 Advanced Software Engineering

A course on state-of-the-art software engineering for large distributed and concurrent systems. Fundamental principles and concepts for specifying, designing, analyzing, implementing, and testing such systems. Concurrent object-oriented paradigms. Design patterns. Use of tools. Documentation using both formal and informal descriptions. Students will develop at least one large software system as part of the course. Prerequisite: CMPS 271. Annually.

CMPS 485 Computer Graphics

A course that covers the practice of, and underlying mathematical foundation for, interactive graphics programming. Topics include basic graphics systems, graphics primitives and attributes, windows and viewports, clipping, geometric transformations, color systems, 2D texture mapping, and introduction to 3D graphics. Programming in OpenGL will be used. Prerequisite: a grade of at least C+ in CMPS 102. Annually.

CMPS 490 Internship

Computer Science students are expected to work eight full weeks at a recognized firm, in Cyprus or abroad. Internships promote the student's personal development and professional preparation and enable them to develop competencies expected of professionals working in business, government or the broader community. Prerequisite: Senior standing.

CMPS 496 Computer Science Tutorial

Prerequisite: Senior standing.

CMPS 497 Special Topics in Computer Science

A course on selected topics which change according to the interests of instructor and/or students. Topics are chosen from state-of-the-art innovations in software and computer information systems. *Prerequisite*: Consent of instructor. Annually.

CMPS 499 Capstone Project

A course to enhance students' skills with practical experience giving them the opportunity to integrate

knowledge accumulated in different courses. In this course, students must deliver a software product which passes through the design, analysis, implementation, testing, and evaluation stages. *Prerequisites:* senior standing.

Department of Psychology

Mission Statement

The discipline of psychology is dedicated to increasing the scientific understanding of behavior and mental processes at the intrapersonal, interpersonal and group level, and to the application of that understanding to enhance the functioning of individuals, groups, and society. In line with this mission, the Department of Psychology has a threefold mission: to advance and transmit knowledge related to the nature of psychological processes and functioning, to provide a strong foundation in the basic knowledge and skills necessary for research in psychology, and to sensitize students to the applications of psychology in the wider community. This mission embodies the main elements of

AUB's mission, which are to foster freedom of thought, respect for diversity, critical thinking, personal integrity, and civic engagement.

BS in Psychology

- 1. Argue that psychology is an empirical science that seamlessly connects with other social and natural sciences and that it can be clearly delineated from pseudoscience and pop psychology.
- 2. Demonstrate an attitude of critical thinking and objectivity with psychological knowledge, in contexts and towards authority.
- 3. Demonstrate research skills in research design and validity, data analysis and interpretation, data reporting, and applied ethical standards.
- 4. Explain substantive content in key fields of psychology including social and personality psychology, development and abnormal psychology, learning and cognition, as well as perceptual psychology and neuroscience.
- 5. Effectively and fluently communicate psychological content in an oral presentation format and in writing (includes use of the Style Manual of the American Psychological Association).
- 6. Apply psychological concepts, theories, and research findings in daily life and to solve problems

These learning outcomes align with the European qualification framework.

Courses and Course Descriptions

PSYC 101 Introduction to Psychological Science

A survey of the principles and concepts of modern psychological science. Emphasis is placed on critically examining empirical research investigating human behavior and mental processes

PSYC 112 Social Psychology

The aims of the course include introducing students to the field of social psychology, its key concepts and methodologies. Furthermore, students will be developing their presentation, essay writing and research skills.

The course objectives are:

- 1. Introduce the main theories, concepts, and issues in social psychology
- 2. Apply social psychological insights to contemporary social problems
- 3. Critically evaluate contemporary social psychological research
- 4. Understand the limitations of hegemonic approaches to social psychological science
- 5. Explore the impact of context and culture on social behavior

Prerequisite PSYC 101

PSYC 182 Research Design in Psychology

This course is the first part of the core research requirements for undergraduates in psychology. It introduces you to the basic concepts in research methods and statistical analyses for psychological research. This course provides you with a solid foundation in the basic research methods and statistical analyses that will be needed for PSYC 284 and PSYC 290. Moreover, this course teaches you how to develop and write a proposal to conduct psychological research, consistent with the Style Manual of the American Psychological Association. Prerequisite PSYC 101

PSYC 210 Lifespan Developmental Psychology

6 ECTS

6 ECTS

6 ECTS

This course examines contemporary personality theories, methods and applications. Classic theories of personality are discussed within the context of current evidence, with particular emphasis on trait approach, evolutionary, social, cross-cultural, and cognitive approaches to personality and individual differences. Prerequisite PSYC 101

PSYC 220 Psychology of Learning and Behavior

This course investigates the principles of learning and behavior. The psychology of learning, or behavioral psychology, is not to be confused with educational psychology. This course introduces you to the psychology of learning by examining the classical and operant (instrumental) conditioning paradigms, both from an experimental and an applied perspective. Prerequisite PSYC 101

PSYC 226 Cognitive Psychology

This course introduces students to theory and research on human cognition, including perception, attention, memory, language, reasoning and problem solving. Students will learn how sensory input and complex events are represented and stored in the brain, and how this information is used in everyday behavior. Prerequisite PSYC 101

PSYC 235 Political Psychology

The aims of the course include introducing students to the field of political psychology, its key concepts and methodologies. Furthermore, students will be developing their presentation, essay writing and research skills. Prerequisite PSYC 101

PSYC 237 Introduction to Cognitive Science

Cognitive science is the study of human and artificial intelligence, from perception and action to language, reasoning and consciousness. The field draws on diverse disciplines including psychology, linguistics, computer science, neuroscience and philosophy. These sub-disciplines share the goal of "understanding the representational and computational capacities of the mind, and their structural and functional representation in the brain" (Sloan Report, 1978). In this course, we will examine the contributions of these disciplines toward understanding various aspects of cognition and trace the development of the field from its origins to the present. Prerequisite PSYC 101

PSYC 284 Statistical Analysis in Psychology

This course introduces students to basic concepts in statistics and the R environment and language for statistical computing. The course enables students to (1) understand the principles of statistical theory, (2) be able to critically appraise the use of the most common statistical tests in research publications and (3) conduct and report statistical analyses on your own research data. Prerequisite PSYC 101 PSYC 182

PSYC 314 Abnormal Psychology

This course will cover the major theories and controversies around the concept of abnormal behavior, its assessment and diagnosis. We will cover most of the psychological disorders seen in adulthood, their symptomatology, causal theories, risk factors and treatments. Prerequisite PSYC 101

PSYC 322 Behavioral Neuroscience

This course is designed to introduce the student to the field of behavioral neuroscience, its key concepts, theories and methodologies. Prerequisite PSYC 101

PSYC 324 Sensation and Perception

This course introduces students to the physiology and mechanisms of human vision, hearing and smell, with an emphasis on vision and hearing. Students will learn how external stimuli (light, sound, odors), are encoded by sensory receptors and transformed into perceptual experiences. The course will cover the physiology of sensory organs, neural pathways, and perceptual phenomena from everyday life (e.g., illusions, adaptation), that illuminate how sensory input is represented in the brain. The course will also cover methods used to measure and quantify human perception and performance (e.g., psychophysics, signal detection theory). Prerequisite PSYC 101

PSYC 329 Cognitive Neuroscience

This course is designed to give students in-depth exposure to the various developments, theories and research methods in cognitive neuroscience. The emphasis of the course is on the systems level. Each week, students are to examine the neural underpinnings of a broad class of mental processes and put them into the larger context of the psychological sciences. Prerequisite PSYC 101

6 ECTS

6 ECTS

6 ECTS

6ECTS

6 ECTS

6 ECTS

PSYC 330 Clinical Psychology

This course will provide a comprehensive overview of the professional field of clinical psychology, including primarily, the psychologist's tasks of assessment and treatment. Various tools for diagnosis and approaches to psychotherapy will be examined. Current issues in the field including ethical dilemmas, training practices, evidence-based psychotherapy and specialties will also be reviewed. Prerequisite PSYC 101, PSYC 314

PSYC 334 Positive Psychology

The course aims to bring positive psychology to life for you by addressing the key theory, research and applications in this field. Positive psychology is a science of positive individual traits and

subjective experiences promising to prevent pathologies and enhance humans' quality of life. The primary focus is on what makes life meaningful and worth living. Key areas that are studied are courage, wisdom, hope, creativity, future mindedness, happiness, empathy and spirituality. These form the factors that further allow humans, communities and societies to flourish. Prerequisite PSYC 101

PSYC 338 Applied Behavioral Analysis

This course introduces students to Applied Behavior Analysis (ABA). ABA is an area in behavioral psychology concerned with applications of behavioral principles, such as reinforcement and shaping, to a wide range of socially and/or clinically important problems. Research has shown that ABA is one of the most effective treatments in autism intervention. It is also effective in educational settings, business domains (e.g., Organizational Behavior Management), and self-management and self- control matters, to name a few. This course examines these and other basic topics covered in ABA. Prerequisite PSYC 101

PSYC 339 Psychology of Trauma

6 ECTS This course is aimed at gaining an in-depth understanding of the impact of various types of trauma including developmental trauma, torture and imprisonment, domestic violence, war trauma, and single incident traumas such as natural disasters, accidents or sudden losses. We will discuss several theories of trauma that explain the experience cognitively, neurologically, emotionally and physiologically. The course will also cover the socio-political considerations of trauma as well as resilience, recovery and post-traumatic growth. Prerequisite PSYC 101

PSYC 380 History and Systems of Psychology

This course is designed to introduce the student to the history and philosophy of psychology. Prerequisite PSYC 101

PSYC 388 Undergraduate Seminar in Psychology

This course develops the ability to understand and evaluate empirical research in psychology through critical readings of research articles within one or more subdomains of psychology. The aim is to develop an understanding of research questions and methods, including study design, statistical methods and interpretation of data. Students learn to think critically about empirical work and to generate their own ideas within a testable framework. The course will develops academic writing and presentation skills, including the ability to summarize research, formulate logical arguments and critique empirical literature. Prerequisite PSYC 101 PSYC 284

PSYC 440 Special Topics in Psychology

This course provides an in-depth understanding of a topic within a subdomain of psychology (e.g., Applied Behavioral Analysis, Industrial Psychology, Psychology of Religion, Sensory Plasticity and Perceptual Learning). Topics depend on instructor specialty, and course offerings vary across terms. See next syllabus (240A) for example. Prerequisite PSYC 101

PSYC 441 Programming for Experimental Psychology

This course trains students to use programming software for experimental psychology (e.g., PsychoPy, Matlab), providing a core skill for research in the cognitive neurosciences. Students learn to code experiments involving the display of one or more stimulus types and one or more independent variables. The course provides a strong grounding for advanced studies in cognitive neuroscience and experimental psychology more generally. Recommended for students opting for a cognitive research topic for their final year research project. Prerequisite PSYC 101, 182, 284

PSYC 442 Industrial & Organizational Psychology

This course is designed to provide an overview of I/O Psychology including individual, group, and

6 ECTS

6 ECTS

organizational issues resulting in enhanced understanding of the world of business and related career concerns. Prerequisite: PSY 201Industrial and organizational psychology is the application of psychological principles, theory, and research to the work setting. It is the scientific study of employees, workplaces, and organizations. Industrial and organizational psychologists contribute to an organization's success by improving the workplace and the performance, satisfaction, and well-being of its people. An I/O psychologist researches and identifies how employee behaviors and attitudes can be improved through hiring practices, training programs, and feedback and management systems. *Prerequisite PSYC 101*

PSYC 490 Independent Study

24 ECTS

This course trains students to plan, conduct, and write up a full empirical study. The content is dependent on a faculty-member's research program. *Prerequisite* PSYC 101 PSYC 284 PSYC 388

Department of Philosophy, Politics, and Economics

Mission Statement

Philosophy, Politics, and Economics (PPE) is a multidisciplinary major that offers a comprehensive approach to social, economic, and political issues and challenges facing our contemporary world. The program relies on strong foundational courses in each of the three disciplines, as well as a bridging core of courses designed specifically for the major. The major in PPE provides an interdisciplinary program in the liberal arts. It also combines the rigorous tools and theories in politics and economics with normative philosophical analysis, to foster broader vision and critical understanding of our institutions, practices, and policies at local, regional, and international levels. PPE prepares students for graduate studies in various disciplines such as development studies, economics, politics, global affairs, and moral/political philosophy. It also prepares them for careers in public service, international organizations, business, academia, and others. In line with AUB's mission, the program will promote freedom of thought and, respect for diversity, enhance critical thinking, protect personal integrity, and encourage civic engagement.

Bachelor of Arts in Philosophy, Politics, and Economics

Purpose and Objectives

Philosophy, Politics, and Economics (PPE) is a multidisciplinary major that offers a comprehensive approach to social, economic and political issues and challenges facing our contemporary world. The program relies on strong foundational courses in each of the three disciplines, as well as a bridging core of courses designed specifically for the major. The major in PPE provides an interdisciplinary program in the liberal arts. It also combines the rigorous tools and theories in politics and economics with normative philosophical analysis, to foster a broader vision and critical understanding of our institutions, practices, and policies at local, regional, and international levels. PPE prepares students for graduate studies in various disciplines such as development studies, economics, politics and moral/political philosophy. It also prepares them well for careers in public service, international organizations, business, and others. In line with AUB's mission, the program will promote freedom of thought and respect for diversity, enhance critical thinking, protect personal integrity, and encourage civic engagement.

Learning Outcomes

Students who complete this program will be able to:

- 1. Understand basic concepts and theories in economics, politics, and normative philosophy.
- 2. Analyze and apply concepts and theories from philosophy, politics, and economics in addressing public concerns.
- 3. Critically evaluate competing positions and arguments about events, policies, and institutional arrangements.
- 4. Identify and critically analyze the values that inform and shape our economic and political practice and institutions.
- 5. Demonstrate ability to apply research tools and methods in the social sciences.
- 6. Communicate effectively and fluently ideas and research findings orally and in writing.

Course Description

PHIL 100 Political Philosophy

An examination of the main issues of political philosophy, such as political obligation, justice, political rights, and other issues.

PHIL 130 Ethics

An introduction to some of the major normative ethical theories based on the study of the original writings of selected philosophers, including a section on applied ethics.

PHIL 200 Introduction to Logic

An introduction to basic concepts and tools which, in addition to being of interest in themselves, also inform various philosophical discussions and are taken for granted in different areas of contemporary philosophy.

PHIL 201 Special Topics in Political and Moral Philosophy

The course focuses on a selected topic (theme or author) in the field of moral or political philosophy. Example of topics given under Phil 201 include World Poverty and Human Rights, Humanitarian Intervention, John Rawls, Marx, Nationalism, Consequentialism, Liberalism and Communitarianism, Islamic Political Thought.

PSPA 100 Introduction to Politics

An introduction to the study of politics with emphasis on the basic concepts, ideas, and issues relating to the process of government in modern societies.

PSPA 101 International Politics

Through a set of fundamental questions, and building upon students' knowledge of, and interest in, international relations and world politics, this course intends to accompany students in a reflection upon some of the most important international issues.

PSPA 200 Introduction to Political Thought

An introduction to the main currents of political thought in the world (Jewish, Christian-western, Islamic, Black-American, Indigenous), with a focus on theories such as liberalism, libertarianism, Marxism, anarchism, and decolonization.

PSPA 201 Policy Analysis

This is a course on the analysis of contemporary government and policy making. It approaches policy as a multiple hybrid space between state and society, expertise and politics, science and democracy, nature and culture, power and knowledge.

ECON 100 Survey of Economics

Elementary principles of microeconomics and macroeconomics and applications.

ECON 101 Principles of Microeconomics

This course lays out the general principles of microeconomics, which include elements of supply and demand, consumer behavior, production theory, and market structures.

ECON 102 Principles of Macroeconomics

An examination of the main issues of political philosophy, such as political obligation, justice, political rights, and other issues.

ECON 200 Intermediate Microeconomics

Theory of allocation of resources; consumers' choice and classical demand theory, exchange and welfare; theory of production and cost; price and output determination under alternative market structures; game theory and applications to oligopoly. Prerequisites: ECON 100, MATH 102/103

ECON 201 Intermediate Macroeconomics

A study of the aggregate approach to economics, including the determination of output, employment, interest rates, and the price level. Inflation and stabilization policies, budget deficits and the national debt, business cycles, theories of consumption, and investment behavior. Prerequisites: ECON 100, MATH 102/103

ECON 300 Applied Economics

A comprehensive treatment of econometric techniques applied in cross-sectional and time series models. Topics include but are not limited to the estimation of bivariate and multiple regression models; validation tests; corrective methods employed when assumptions are violated; regressions with a qualitative dependent variable; Logit models; VAR; and co-integration. Prerequisite: PHPE 310

PHPE 100 Introduction to PPE

Introduction to PPE is the first gateway course students take. It combines all PPE disciplines and should be taught by at least two faculty members from distinct disciplines. In this course students are introduced to the emergence of the social sciences from philosophy in the 19th century and how they forged their identities in the 20th century. As each discipline has established its boundaries, we bring them back together in the PPE degree. The recent re-emergent interest in the benefits of interdisciplinarity, in how the three disciplines can complement each other working in pairs or as triples, in both theoretical and applied work, will cover a significant portion of the course. The course also introduces the history of the PPE degree and the varied career paths it offers its holders.

PHPE 200 PPE Economic Justice

This course introduces and examines different conceptions of economic justice. It looks closely at different answers that contemporary philosophers and economists give to the question: How and on what grounds should economic benefits and burdens be distributed? The aim of the course is to deepen the students' understanding of debates, issues, and distinctions related to economic justice. It equally aims at developing and sharpening students' powers of critical thinking and analysis.

PHPE 201 Conflict, Peace, and Justice

This course introduces and examines different phenomena of war, conflict, peace and conflict resolution from the perspective of politics and philosophy. It explores the different conceptions of violence in contemporary societies and approaches violence as a political, philosophical and epistemological issue. The aim of the course is to deepen the students' understanding of debates, issues, and distinctions related to conflict, peace and violence. It equally aims at developing and sharpening students' powers of critical thinking and analysis.

PHPE 300 Political economy

This course starts from the premise that a long-term view of production, power and social change is essential for understanding enduring patterns of wealth and poverty in the contemporary world. By emphasizing the historical and ecological specificity of the infrastructures of social power inherited from the agrarian past, the course tries to highlight the pitfalls of deploying models based on European example for understanding development and social change in other parts of the globe.

PHPE 310 Research Design in PPE

Research Design is the second gateway course in PPE and is taught by one instructor from politics and one instructor from economics. It introduces PPE students to the different applied research methods and tools they are likely to encounter and employ in economics and politics. It is divided in two parts, the quantitative and the qualitative. This course is a **prerequisite** for ECON 300.

PHPE 400 PPE Regional Topics

This course is open to disciplinary and/or interdisciplinary approaches that take the region - Middle East & Mediterranean - as the venture point both for theory production and empirical focus. Themes can include the following: human development in the region; gender in the Middle East and North Africa; humanitarian intervention and crisis in the Global South: Government in the Middle East and the Arab world: Political Islam: maritime politics; refugees, borders, and migration; etc.

PHPE 401 PPE Special Topics

This course is open to disciplinary and/or interdisciplinary approaches that take the faculty's own research as the core content both for teaching and empirical focus. AUB Mediterraneo faculty will be invited to teach in a gamut of themes that touch upon PPE interdisciplinary aspects, including gender; crisis; government; inequality; solidarity; social movements; disaster; behavioral public policy; etc.

PHPE 410/411 PPE Application/Dissertation

This capstone sequence of courses starts in the Fall of the final year and takes two semesters to complete. Its completion entails the writing of a substantive piece of research that combines at least two disciplines.

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

Students will work with a primary advisor from one discipline and a secondary advisor from another discipline. A thesis of about 10,000 words will be written and will form the grade.

PHPE 420 Qualitative Methods for the Social Sciences

The course introduces qualitative research methods commonly used in the Social-Political Sciences and Humanities. A wide range of qualitative methods will be covered in the course and students will then be able to apply these to specific disciplines.

PHPE 430 Ethics and Public Affairs

Ethics and public affairs engages PPE students on critical societal issues that arise in ethics, economics, politics, globalization, and the daily life of citizens. Students will discover and discuss public affairs that arise within a context of ethics, politics and economics.

6 ECTS

Department of Industrial Engineering and Management

The Department of Industrial Engineering and Management offers an undergraduate degree program leading to a Bachelor of Science in Industrial Engineering and a graduate degree program leading to a Master's of Engineering Management.

Bachelor of Science (BS) Major: Industrial Engineering (IE)

The Industrial Engineering Program extends over a four-year period and is offered exclusively on a daytime, on-campus basis. The program is offered in nine terms whereby eight terms are 12/13- week Fall/Spring terms given over four years, and one eight-week summer term taken during the third year of the program in which students are required to participate in a practical training program with a local, regional or international organization.

IE Program Educational Objectives

Graduates of the IE program will be able to:

- assume key roles in a range of industries that use industrial engineering, including manufacturing and service.
- effectively participate in, coordinate and manage diverse teams of engineers and analysts, especially in large-scale systems.
- pursue advanced degrees in industrial engineering and other related fields at reputable regional and international universities.
- appreciate the importance of professional ethics and actively use their knowledge and experience to the benefit of the community.

IE Program Learning Outcomes

- Upon graduation, IE students will be able to demonstrate:
- an ability to apply knowledge of mathematics, science and engineering to model, optimize and evaluate integrated systems of people, technology and information.
- an ability to design and conduct experiments, as well as to analyze and interpret data.
- an ability to design a system, component or process to meet desired needs within realistic constraints such as economic, environmental, social, political, ethical, health and safety, manufacturability and sustainability.
- an ability to function on multidisciplinary engineering teams.
- an ability to identify, formulate and solve engineering problems and to develop integrated solutions to large-scale, sociotechnical problems through quantitative models.
- an understanding of professional and ethical responsibility.
- an ability to communicate effectively in oral and written form.
- the broad education necessary to understand the impact of engineering solutions in a global, economic, environmental and societal context.
- recognition of the need for, and ability to engage in, lifelong learning.
- knowledge of contemporary issues.
- an ability to use the techniques, skills and modern engineering tools necessary for engineering practice.

IE Program Requirements

The BS curriculum in Industrial Engineering is a four-year program (with one summer) consisting of 244 ECTS of coursework, split into 190 ECTS compulsory courses and 54 ECTS electives.

The IE curriculum is supported by four pillars:

- 1. basic science courses
- 2. general education courses
- 3. basic business courses and
- 4. general engineering fundamental courses. The specific course requirements are as follows:

Basic Science Courses: MATH 101, MATH 201/202, MATH 203, STAT 101, PHYS 100, CHEM 100/101 General Education Requirements: 12 ECTS in English, ENGL 100 and ENGL 102; 6 credits in Arabic; 3 credits on quantitative reasoning, MATH 100; 12 ECTS in natural science including BIOL 101; 24 ECTS in the humanities including a course on Greek Studies; 12 ECTS in social sciences, ECON 101and; 6 credits on ethics and community engagement including INDE 330.

Basic Business Courses: BBAC 100 and BBAC 201

Engineering Fundamentals: CIVE 121, CMPS 101, MECH 300 The IE courses are distributed in three core areas:

- 1. Operations Research
- 2. Engineering Management
- 3. Production Systems.

⁵ New course developed jointly by ME and ECE

Courses and Course Descriptions

INDE 200 Engineering Economy

A course that covers principles, basic concepts and methodology for making rational decisions in the design and implementation of real engineering projects; time value of money, depreciation, comparing alternatives, effect of taxes, inflation, capital financing and allocation, and decision under uncertainty. Every term.

INDE 210 Operations Research I

A course on operation research modeling concepts with an emphasis on linear programming; topics include: linear programming, network programming and project management. *Prerequisite: MATH 201 or Math 202*, or equivalent. Annually.

INDE 211 Operations Research II

Another course on operation research modeling concepts with an emphasis on probability models and stochastic processes; topics include conditional probability, discrete- and continuous-time Markov chains and their application in modeling queues, inventories and production process behavior. Prerequisite: STAT 101 or equivalent. Annually.

INDE 220 Work Measurement and Methods Engineering

A course on system and work design concepts; time studies; performance rating and allowances; standard and pre-determined times; work methods improvement; design of manual work, equipment, tools and work environments; line balancing; manpower determinations, job analysis and incentives; systems analysis, lean and value analysis. Prerequisite: STAT 101 or equivalent. Annually.

INDE 300 Facility Planning and Material Handling

Inter-relationships between facilities, process design, systematic layout procedures, computer aided layout, location analysis models, material handling analysis and concepts, warehousing storage and retrieval systems. Prerequisites: INDE 210 and INDE 211. Annually.

INDE 301 Introduction to Project Management

Introduction to project management for engineers. Conception, planning, scheduling, budgeting, leadership, management, tracking and completion of projects. Project management software is introduced and used. Prerequisites: INDE 210 and INDE 211. Annually.

INDE 302 Human Factors Engineering

Designing for human performance effectiveness and productivity. Introducing human factors and ergonomics. Design and evaluation methods. Perception: vision and hearing. Cognition. Displays and controls. Work-space design. Biomechanics of work. Stress and workload. Safety and human error. Humancomputer interaction. Prerequisite: INDE 220. Annually.

INDE 303 Statistical Quality Control

Design of quality control systems; quality methods for establishing product specifications; process control; variables and attributes charts; acceptance sampling; operating characteristics curves; process capabilities; QC software. Prerequisite: STAT 101. Annually.

INDE 310 Production Planning and Inventory Control

Methods of production and inventory planning. Single-product replenishment systems. Inventory management for special classes of items and products. Multiple item and multiple location inventories. Production planning and scheduling: aggregate production planning, MRP, JIT, OPT and short-range production scheduling. Prerequisites: INDE 210 and 211. Annually.

INDE 311 Discrete Event Simulation

System definition; model formulation, Monte-Carlo method; random number generation; discrete events; system entities and its attributes. Emphasis on analysis of systems and models of real-life problems. Lab experience with a modern discrete-event simulation package (e.g., ARENA). Prerequisite: INDE 211. Annually.

INDE 330 Engineering Ethics

A course on engineering ethics covering responsibility in engineering; framing the moral problem; organizing

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

principles of ethical theories; computers, individual morality and social policy; honesty, integrity and reliability; safety, risk and liability in engineering; engineers as employees; engineers and the environment; international engineering professionalism; and future challenges. Every term.

INDE340 Engineering Entrepreneurship

This course provides students with the tools necessary to create and grow a successful, innovative technology enterprise. Topics include evaluating market opportunities, designing profitable business models, producing a solid business plan, raising capital, addressing legal considerations and developing a winning team. Prerequisite: INDE 200 or equivalent.

INDE 401 Information System

This is a course that answers the questions: What is information? How can it best be stored? What to call it? The course also covers the following topics: abstraction, interfaces, barriers, specification, documentation, relational calculus and architectural abstractions, data structures for fast data storage and retrieval, encryption, putting things on the Web, data warehousing and data mining. Annually.

INDE 410 Data Analytics for Operations Research and Financial Engineering

Students will learn to identify, evaluate and capture analytic opportunities that create value for an organization. Basic descriptive analytics methods are reviewed utilizing specialized software (e.g. R) in analyzing large data sets. Predictive analytics techniques including clustering, classification and regression are covered in detail. Prescriptive analytics applications on utilization simulation and optimization over large data to improve business decisions are presented. Annually.

INDE 450 Approved Experience

Practical training program with a local, regional or international organization. Summer.

INDE 460 Final Year Project I

This is a capstone course where IE students utilize knowledge, they acquired from different courses to design and develop an IE-related product or service. This is the first part of the course that spans through the final year of the student's study. Prerequisite: Completion of third year in IE requirements. Fall.

INDE 461 Final Year Project II

This is the second part of the IE capstone course. Prerequisite: INDE 460. Spring.

Master of Engineering Management (MEM)

The Master of Engineering Management (MEM) program prepares graduate students to assume the responsibilities of professional engineering management. The EM program provides students from all engineering backgrounds with the necessary leadership abilities, technical expertise, and communication skills to meet the need for both tech-savvy and business-savvy professionals. To achieve this aim, the EM curriculum combines business basics, quantitative methods, and behavioral science in a practical, problemsolving framework. Furthermore, the program is flexible and EM students can tailor their courses to suit their needs and preferences. Students can select from two areas of concentration (1) Financial and Industrial Engineering (FIE) and (2) Project and Program Management (PPM). In addition, students can elect to pursue the thesis or non-thesis option within the program.

MEM Program Educational Objectives

The educational objectives of the MEM program are as follows.

- 1. Assume managerial and leadership positions in technical and non-technical environments.
- 2. Maximize efficiency and safety in complex systems.
- 3. Engage in research in engineering management and closely-related fields.
- 4. Communicate engineering concepts effectively, both in oral and written form.
- Engage in lifelong learning, especially, in the context to engineering and management.

MEM Program Learning Outcomes

Upon graduation, MEM graduates will be able to:

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

- 1. Describe the general theories, methods, and tools for managing (a) resources, (b) finance, (c) risk, and (d) information for enhanced decision-making in engineering and business environments.
- 2. Exhibit self-directed learning and critical-thinking skills.
- 3. Develop scientific managerial skills in fields that promote innovation, such as management of technology, financial engineering, and complex project management.
- 4. Develop skills that foster interdisciplinary collaboration, teamwork, and leadership, especially in different project and industrial settings.
- 5. Develop effective verbal and written communication skills.
- 6. Apply analytical (mathematical, statistical, and computer-based) tools to optimize the performance of socio-technical systems, such as infrastructure, logistics, manufacturing, construction, financial, and healthcare systems.
- 7. Design tools for complex systems using empirical approaches that optimize user cognitive and physical wellbeing.
- 8. Develop and defend a thesis topic or a research project in one of the engineering management areas.

MEM Program Requirements

The requirements for the Master of Engineering Management degree can be fulfilled by pursuing one of the two following options.

Non-Thesis Option

Under this option, a student is required to complete a total of **90 ECTS**, subdivided as follows:

- Four core courses (36 ECTS)
- Two core courses from the student's area of concentration (18 ECTS)
- Two electives from the student's area of concentration (18 ECTS)
- Two free electives (18 ECTS)
- Seminar (0 credit)

Thesis Option

- Under this option, a student is required to complete a total of **90 ECTS**, subdivided as follows:
- Four core courses (36 ECTS)
- Two core courses from the student's area of concentration (18 ECTS)
- One elective from the student's area of concentration (9 ECTS)
- One free elective (9 ECTS)
- Thesis (18 ECTS)
- Seminar (0 credit)

Courses and Course Descriptions Core Courses

ENMG 601 Strategic Management of Technology 9 ECTS The organization as a whole and its interaction with its environment. The corporation as it undergoes the

process of a global transformation. Mergers, acquisitions, outsourcing, downsizing and privatization. Framework of analysis for the identification of central issues and problems usually faced in strategic management. Understanding the effect of present and future environments on the corporation's welfare.

ENMG 602 Introduction to Financial Engineering

Overview of financial statements. Accounting concepts and methods. Measuring and reporting assets and equities. Financial statement models and their use for valuation. Financial feasibility and applied interest analysis. Fixed-income securities and bonds. Term structure of interest rates. Bond portfolio structuring and immunization. Capital budgeting. Dynamic cash flow management.

ENMG 603 Probability and Decision Analysis

Framing of decision problems. Influence diagrams. Review of probability (random events and variables, probability distribution functions and so on). Decision Trees. Decision analysis view of assessment (value of information, sensitivity). Multiple attribute decision objective. Mathematical treatment of risk, tolerance and avoidance. Assessing risk using Monte Carlo simulation.

ENMG 604 Introduction to Operations and Process Management

This course introduces students to the design and management operations in an organization for a sustainable and competitive advantage. It addresses theoretical and practical insights into service and manufacturing operations, in both the private and public sectors. Topics covered include forecasting, strategic and global operations, facility layout and location, aggregate planning, inventory management, MRP and short-term scheduling. Case studies and hands-on software tools will be used.

Project and Program Management Area Courses

ENMG 631 Project Planning Scheduling and Control

Extended overview of project management. Basic planning and scheduling concepts. Project participants and roles. Project management applications and growth. Project team formation.

Dealing with time. Project planning and costing. Advanced scheduling techniques. Integrated project costtime control. Resource and procurement planning.

ENMG 632 Advanced Topics in Project Management

Planning and scheduling under constraints. Trade-off analysis in a project environment. Project cost control from a client's perspective. Project risk management. Managing the international project. Determinants of project success. Lessons learned in project management. Strategic planning in project management. Modern developments in project management.

ENMG 633 Project Deliverance and Contracts

Overview of project organizations. The design-build project delivery approach. The build-operate- transfer project delivery approach. Innovative delivery approaches, financial schemes and associated contracts. Allocation of risks in contracts. Bidding phase characteristics. Components of the proposal package. Evaluation of the commercial, financial and technical components. Contract formation and agreement closure. Project quality management.

ENMG 634 Program and Portfolio Management

This course presents a view of managing projects from an organizational perspective. The main areas of discussion will be strategic alignment, the role of effectively managing organizational assets through an enterprise project management office, portfolio and program management. Using specific examples and a case study approach, students will explore the importance of using organizational strategies to align projects and apply practices to create portfolios of programs and projects to efficiently leverage organizational assets.

ENMG 641 Lean Engineering Concepts

This course focuses on the emerging concept of lean performance in the construction industry. Topics covered include the origin of lean concepts, application to the design process, implementation in construction, contracting for lean performance and value improving practices (e.g., benchmarking, constructability and value management).

ENMG 642 Dispute Resolution on Projects

The course covers construction contract conditions governing claims and disputes. Focus is on claim

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

evolvement and administration (including issues dealing with time barring, notification and substantiation) and ADR methods and amicable settlement.

Financial and Industrial Engineering Area Courses

ENMG 605 Engineering Management Statistics

Review of probability and probability distributions. Data description. Random samples and sampling distributions. Parameter estimation. Tests of hypotheses. Design and analysis of single-factor experiments: the analysis of variance. Design of experiments with several factors. Simple linear regression and correlation. Multi-variable regression. Nonparametric statistics.

ENMG 606 Simulation Modeling and Analysis

Generating discrete and continuous random variables. Discrete-event simulation. Statistical analysis of simulated data. Variance reduction techniques. Statistical validation techniques. Markov chain and Monte Carlo methods. Experience with a modern discrete-event simulation package (e.g., ARENA, SIMIO).

ENMG 607 Stochastic Models and Applications

Review of probability and random variables. Poisson process, renewal theory, queueing models, reliability theory, Markov chains, Brownian motion, random walks and Martingale, stochastic order relations.

ENMG 608 Fundamentals of Data Science

This course provides an introduction to applied data analysis, with an emphasis on providing a conceptual framework for thinking about data from both statistical and machine learning perspectives. Topics covered are based on statistics (frequentist, Bayesian) and machine learning, and include binary classification, regression, bootstrapping, causal inference and experimental design, and multiple hypothesis testing. Datadriven problem sets and a project are also included.

ENMG 612 Financial Engineering

Financial Engineering is the tailoring of cashflows over time to be as desirable as possible. This involves the scientific design of financial products which are traded in the financial markets.

Examples of financial products (also known as financial instruments or securities) include bonds, stocks, futures, and options. This course aims to (i) introduce students to the investment process and financial markets; and (ii) explain how Financial Engineering is applied to structure an important class of financial securities. Specifically, the course will focus on portfolio management and valuation of financial instruments modeled as single-period random cashflows (e.g. stocks) and will introduce the student to the pricing of a basic class of financial derivative securities (forwards, futures and options) using discrete-time tools (i.e., the underlying asset prices is assumed to change at discrete time points). This study has many direct applications in the financial market and provides insights that can be extended to handle more complex financial instruments with continuous-time analysis. (These will be covered in ENMG 625 Financial Engineering II.) The course will also provide the students with a good exposure to areas such as mathematical modeling, optimization, probability, and, more generally, to finance, and operations research.

ENMG 613 Financial Engineering II

Derivative securities: forwards, futures and swaps; models of asset dynamics; options theory; interest rate derivatives. General cash flow streams: optimal portfolio growth, general investment evaluation.

ENMG 614 Supply Chain Design and Management

The course is an introduction to supply chain management and its key issues, such as logistics, network configuration, inventory management, distribution strategies and strategic alliances. The value of information in supply chains, information technology and decision support systems for supply chain management are also covered.

ENMG 615 Deterministic Optimization Models

This course is intended to be an introduction to the fundamental models, methods and applications of deterministic optimization. The focus will be on formulating and analyzing large-scale deterministic optimization models, which includes linear, integer, dynamic, and non-linear programs.

ENMG 616 Advanced Optimization

9 ECTS Topics covered include nonlinear, stochastic, dynamic, and nonconvex programming. Optimization in the context of big data, machine learning and prescriptive analytics are discussed. Students will develop skills

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

9 ECTS

in modeling complex systems using mathematical programming. Students will also have hands-on experience in using software packages for solving optimization problems.

Faculty of Business

Department of Business Intelligence and Management

Mission Statement

Enable world-class business research, learning, and knowledge transfer from our authoritative anchor point within the MENA region.

Bachelor of Business Administration

Purpose and Objectives

The Bachelor of Business Administration (BBA) program is for university entrants focused on translating their thinking and interests into career opportunities in business.

The program combines business and arts and sciences in a rigorous learning environment to help students gain a holistic understanding of the social, cultural and economic environment in which they operate.

The curriculum's liberal arts-based operational focus is deeply grounded in analytics while emphasizing soft skill areas such as leadership, decision-making and ethical reasoning.

Students will be able to build their business mind by having a holistic understanding of the economic, social, cultural, and global environments through combining the business learning with that of humanities, arts and sciences. In addition, they will be able to build their analytical skills, practical techniques and theories, along with acquiring soft skills such as leadership, decision making and ethical reasoning in order to achieve greater goals.

Learning Outcomes Knowledge

On successful completion of this program the graduate will be able to:

- Acquire the core of essential business professional knowledge and competence
- Recognize appropriate analytical-quantitative and organizational-behavioral approaches
- Understand, explain and apply principles of ethical behavior in managerial decision-making situations
- Identify organizational leadership approaches
- Identify attributes of effective and efficient teams
- Understand the principles of effective and efficient business communication
- Identify key globalization factors and their impact on business competitiveness

Competence and Skill

On successful completion of this program the graduate will be able to:

- Describe and implement appropriate analytical-quantitative and organizational-behavioral approaches
- Explain and practice principles of ethical behavior in managerial decision-making situations
- Define organizational leadership approaches
- Define attributes of effective and efficient teams and apply teamwork principles in a team exercise situation
- Explain and implement the principles of effective and efficient business communication
- Define key globalization factors

Responsibility and Autonomy

On successful completion of this program the graduate will be able to:

- Apply the core of essential business professional knowledge and competence to a familiar situation
- Apply the appropriate analytical-quantitative and organizational-behavioral approaches to managerial decision-making situations
- Apply principles of ethical behavior in managerial decision-making situations
- Apply a leadership approach to an organizational situation
- Apply teamwork principles in a team exercise situation
- Apply the principles of effective and efficient business communication

• Show the impact of key globalization factors on business competitiveness

The Bachelor of Business Administration in Management is a 4-year program for a total of 240 ECTS.

The program consists of:

- Compulsory Core Business Courses -CB-120 ECTS / Including three free business electives (FB), and one free elective (FE)
- $\circ \quad \text{Compulsory Business Concentration Courses-BC- 30 ECTS}$
 - General Education Courses (GE) | 90 ECTS

Courses and Course Descriptions

BBAC 100 Financial Accounting

Financial Accounting is an introductory core business course. It introduces students to the language of business and its use as a tool for the decision-making process. Students learn the underlying principles of externally reported financial information governed by the IFRS. They learn the accounting cycle that enables them to prepare and analyze the financial statements. Students will be required to use this knowledge in other business courses that require them to make decisions based on reported financial information such as finance and management courses in that it provides them with the ability to understand the underlying economics of the financial statements and their implications. **(Co-requisite BBAC 180)**

BBAC 101 Introduction to Business

This course introduces students to the many facets of private enterprise systems and of the businesses that operates within its framework. Moreover, it will focus on the overview of the forces within the business environment i.e. globalization, economics, government, and society.

This course is a key core course within the Faculty of Business. Students use this course to learn more about the business landscape, by focusing on business systems, key functional areas within the firm such as marketing, operations, accounting, finance, management, and human resources.

BBAC 102 Operations Management

The course is an introduction to contemporary operational management issues and techniques. The focus of the course is on the tradeoffs in various decision areas and how operational strategies are aligned to the organization strategy. A strong emphasis is placed on the development and use of the quantitative models to assist in decision making. By the end of the course, students will have a solid understanding of the key role Operations Management plays in competitive advantage. Students should expect to become familiar with various operations processes and systems. Further, they will acquire some of the skills necessary to critically analyze a firm's performance from an operation point of view.

BBAC 180 Financial Accounting Lab

The Lab presents a comprehensive project which complements an introductory financial accounting course

6 ECTS

6 ECTS

6 ECTS

uise

from both a technical and conceptual perspective. It demonstrates the underlying accounting standards and principles customized to student suggested business events. The use of Excel (Appendix) shows students the interdependence of accounting cycle steps from a technical standpoint. A fictitious illustration is used to introduce business and accounting concepts and application. Students use their imagination and general knowledge to start-up a small service organization. They demonstrate their knowledge in preparing and using accounting information. **(Co- requisite BBAC 100)**

BBAC 190 Business Communication Skills Workshop

A 12.5-hour workshop designed to develop students' business communication. As a core competency, oral communication is emphasized in every meeting. In addition, students will understand the principles and value of effective business communication. They should demonstrate effective communication skills through individual presentations, group activities, small debates, and impromptu speech. Moreover, students should be able to discuss some business cases and general topics, work in teams on small projects, master body language, manage business meetings, and deliver project presentations using PowerPoint and visual aid. Finally, they should also provide constructive feedback and objectively evaluate each other through different activities and games.

BBAC 200 Foundations of Information Systems

This course introduces information systems that raise productivity, create customer value and sustain competitive advantage. It shows how the integration of information technology and

information systems in the organization's work processes adds value for the business and its customers. It focuses on the following topical areas: competitiveness, functional information systems, e-commerce and supply chain systems, business intelligence systems, and systems development.

BBAC 201 Fundamentals of Management and Organizational Behavior

A course that focuses on the management of the modern organization and the employees within, preparing students for their role as future managers and leaders. It explores essential management concepts, processes and techniques from an organizational behavior perspective. Main topics covered include management history and evolution, motivation, decision-making, leadership, power and politics, learning and perception, communication, managing groups and teams, and human resource management.

In addition to introducing theories, concepts and tools that are needed to manage various organizations of different vocations (private, public, for profit, NGO, governmental and others), this course involves the practical aspects of leadership and management. This allows students to gain a fuller understanding of the discipline of management and organizational behavior, and prepare for their role as future managers and leaders.

BBAC 202 Business Data Analysis

Business Data Analysis introduces the basic statistical methods that are commonly used for managerial decision-making. Emphasis is on applying methods and interpreting results. Extensive use of statistical software. The course first reviews the descriptive statistics and basic concepts of probability distributions, in particular the normal distribution. Then the course studies topics on inferential statistics such as confidence intervals, hypothesis testing, one-way analysis of variance and correlation analysis. The course finally covers simple linear regression and introduces students to multiple linear regression and time series forecasting. (Prerequisites: MATH 103 and CMPS 108; Co-requisite BBAC 280)

BBAC 203 Business Finance

This course teaches the tools that determine and analyze the major decisions a financial manager has to make, including identification of the firm's goals, time value of money, use of discount cash flow models, capital budgeting under certainty, capital structure as it relates to cost of capital, dividend policy, and ethics in finance. (Prerequisite: BBAC 100; Co-requisite: BBAC 281)

BBAC 204 Principles of Marketing

This course is designed to introduce the basic concepts and practices of modern marketing as they are applied in a variety of settings: in product and service companies, in consumer and business markets, and in small and large businesses.

This course follows a practical approach and students are required to apply theoretical concepts in a group Marketing Plan Project which includes both a written component and an in-class presentation (utilizing PowerPoint slides). It is expected that this approach will allow students to understand each marketing concept as well as have the ability to apply these concepts to issues that occur daily in the business world.

6 ECTS

BBAC 280 Business Data Analysis Lab

This is a lab course in which students practice the concepts covered in BUSS 200, Business Data Analysis, which introduces the basic statistical methods that are commonly used for managerial decision-making. The course first reviews the descriptive statistics and basic concepts of probability distributions, in particular the normal distribution. Then the course studies topics on inferential statistics such as confidence intervals, hypothesis testing, one-way analysis of variance and correlation analysis. The course finally covers simple linear regression and introduces students to multiple linear regression and time series forecasting. (Corequisite BBAC 202)

BBAC 281 Business Finance Lab

This lab complements the introductory finance course from an applied perspective. The course is designed for students to apply the core concepts such as time value of money, discounted cash flow analysis, capital budgeting and estimating the cost of capital. Students will use a software package, such as excel, to address, from a practical perspective, the decisions that financial managers face. (Co-requisite: BBAC 203)

BBAC 290 Strategic Career Planning Workshop

A 12.5-hour workshop designed to guide students on how to plan and develop their careers in all types of industries and work scopes. The workshop will also provide students with some specific guidelines on how to assess their interests, skills, value satisfiers, and lifestyles. It will also help students to search for a job, study and analyze job vacancies, write their resume, and cover letter as well as get well prepared for a job interview.

BBAC 300 Management Accounting

A course that covers the use, interpretation, and analysis of management accounting information for management decision-making, planning, and control of operations. The focus is on cost behavior, cost measurement, budgeting, performance measurement and evaluation, responsibility accounting, and product costing. Management Accounting emphasizes the application of accounting information to solving problems in all major functional areas of an organization with a view of improving overall performance and profitability. (Prerequisites: BBAC 100)

BBAC 301 Business Ethics

This is an introductory course that provides students with an overview of business ethics at the individual. organizational, and societal levels. Issues such as corruption, sexual harassment, fair trade, fraud, whistleblowing, corporate social responsibility, ethical norms, ethical values, environmental responsibility and many more will be examined both in the international as well as the local Lebanese context. Ultimately, the course is designed not only to introduce students to a wide array of current ethical issues in business but to also foster skills related to critically analyzing the ethical and social dimensions of business-related problems in order to build more ethically informed rationales for decision making. The course is also designed to systematically improve the student's writing and presentation skills. (Prerequisites: BBAC 201)

BBAC 302 Entrepreneurship and Business Planning

In this course students will experience entrepreneurship firsthand by coming up with an entrepreneurial endeavor that they will pitch to expert jury at the end of the course after applying the design thinking and lean start-up methodologies. First, students will define a problem that they would like to solve using the design thinking process and then brainstorm multiple solutions and select the best using a sound selection mechanism. Using the lean startup methodology, they will come up with a business plan for this business in parallel to creating a prototype and financial projections for the first three years. This experience is culminated with creating a pitch deck and pitching the entrepreneurial initiative in front of expert external jury. The course helps students to understand and experience the mindset of an entrepreneur by providing them with several cases and examples that are both international and regional in addition to exposure to real entrepreneurs through guest speaking and mentorship sessions. (Co-requisite: BBAC 380)

BBAC 303 Business Analytics Using Data Mining

Today business analytics is helping organizations in every industry to use information for business advantage. It is helping them meet objectives like competitive differentiation, growth, and cost management by making choices about what markets to pursue, how to configure and price offerings, and how to make operations more effective and efficient. Nowadays, companies are immersed in massive amounts of data. They are more and more challenged with how to convert these data into actionable business insights. This course introduces applied data mining techniques including data processing and a set of data analytics tools related to predictive modeling such as classification and regression trees, logistic regression, artificial neural

3 ECTS

networks, and other techniques. Students will learn how to use these tools to provide practical solutions to problems faced by today's businesses. They will gain knowledge on how to improve decision making by adopting data analytics approach. The course is designed for advanced undergraduate students and features the use of data mining software. Case studies and practical examples will be extensively presented throughout the course. (Prerequisite: BBAC 202)

BBAC 304 Internship/Practicum

A summer period of quided work experience under faculty supervision by a mentor, and corporate quidance by a preceptor, designed to acquaint students with the world of work and help them acquire core values and basic skills necessary for an understanding of the global economy.

All BBA students must successfully complete the internship requirement (BBAC 304). Normally, the internship takes place at the end of the third year. All students applying for the internship program must have completed BBAC 203, BBAC 201, BBAC 204, BBAC 200, and BBAC 290

Normally, internships are assigned and/or allocated by the internship and placement officer. However, students may solicit their own internships.

Other internship requirements are as follows:

- The internship is normally two months in duration
- The student must comply with the policy of the host company regarding working hours
- The work week must not be less than 5 working days
- The student will be supervised by a faculty member throughout the internship period •
- The internship is graded. The grade is based on the evaluations of both the direct work supervisor and the OSB faculty supervisor
- The internship grade is included in the computation of the student's overall average

(Prerequisites: BBAC 203, BBAC 200, BBAC 204, BBAC 201, BBAC 290)

BBAC 380 Entrepreneurship and Business Planning Lab

This lab complements the Entrepreneurship and Business Planning course by developing the practical part through a pitch deck and pitching the entrepreneurial initiative in front of expert external jury. The course helps students to understand and experience the mindset of an entrepreneur. (Co-requisite: ENTM 220)

BBAC 400 Strategic Management

Strategic Management is the senior capstone course for all business administration majors. What this means is that it is an integrative, big-picture course.

In this course, students acquire the tools to apply business fundamental knowledge acquired in previous foundation courses to strategy formulation, implementation, and evaluation/control approaches. Students are required to use this new knowledge, as well as knowledge acquired from other functional area courses such as human resources, marketing, accounting, finance, operations and information technology, to identify current problems and chart the future direction of different businesses and industries. In sum, through this course, the student culminates his/her undergraduate curriculum through the application of core functional foundation concepts in an integrative way to various business situations. (Prerequisites: BBAC 300, BBAC 203, BBAC 201, BBAC 204, BBAC 202, BBAC 301, BBAC 200, and BBAO 308)

BBAC 401 Business Law

The main objective of the course is to help students understand the legal aspects of common American. European, and international business activities and the formation and functioning of commercial entities. This is accomplished through lectures, in-class discussion, and reading and analysis of court cases using the American case law method of legal education. Business law is an essential course for all business students. It provides future managers with the knowledge of various terms of law and basic legal rights and responsibilities. It also provides critical thinking skills and the ability to understand how individuals interact within the legal system, the laws, concepts and rules which dictate the behavior in such interactions, and awareness of the rules that regulate and protect commercial activity. In this course students will also apply concepts from other functional areas of management practice such as human resource management, marketing, accounting and finance to solve legal problems.

BBAB 300 Leadership Development: Enhancing Interpersonal Skills in Organizations

This course is designed to instruct beyond traditional management and business hard skills and towards experiential dissection of the foundations of better interpersonal skills. In fact, the aim of this course is to provide each participant with an opportunity to better understand how understanding him- or herself

6 ECTS

6 ECTS

3 ECTS

3 ECTS

(intrapersonal effectiveness) relates to interpersonal and managerial effectiveness. The premise of the course is that successful managers must first have an understanding of self and how the self-interacts with others to facilitate organizational success.

Topics covered include: self-disclosure and trust, stress and time management, conveying verbal messages, listening, diversity, ethical decision making, and negotiation, and facilitation. The course strikes a balance between theory and application providing both conceptual and applied material appropriate for use in real-life personal, academic, and professional situations. (Prerequisites: BBAC 201 and ENGL 101)

BBAB 301 Human Resources Management

A course that deals with understanding and managing human capital as a major strategic asset, macro and micro manpower planning, skill surveying, management learning, de-learning and relearning, results-driven performance in the age of virtual organizations and telecommuting, and knowledge workers in a rapidly changing corporate context within a knowledge global economy. (Prerequisites: BBAC 201 and ENGL 101)

BBAB 302 Training and Development

This course introduces students to the theories, application, and skills development aspects of Training & Development. Students will learn how to assess, design, develop, implement, & evaluate a training program. In this regard, concepts of training, including total needs assessment,

Employees'/trainees' learning motivations, learning & transfer theories as well as evaluation methods will be covered. This course also aims to give an understanding of how 'Training & Development' is integrated into the overall organizational strategy. From an application point of view, students will design, develop, & evaluate their own training programs. Finally, students will develop training skills through conducting training sessions. (Prerequisites: BBAC 201 and ENGL 101)

BBAB 303 Gender, Work, and Inclusive Human Resource Systems

This course raises awareness and deepens understanding of the significant role of gender and diversity in contemporary work organizations. It offers multiple perspectives to analyze issues of gender and diversity at the levels of identity, organizational practices and society. The course provides students with conceptual and practical tools to critically examine social and organizational practices of exclusion and inclusion. The course further develops students' reflective skills in detecting how they, and the organizations they are participating in are doing gender and diversity.

Moreover, students learn how they can act as change agents in making exclusionary practices visible and creating inclusive workplaces. During the course students will also develop their writing, group working as well as presentation skills. (Prerequisites: BBAC 201 and ENGL 101)

BBAB 309 Family Business: Issues and Solutions

This course focuses on family businesses: their importance, structure, governance, management, challenges; issues and solutions relating to succession, inheritance, business continuity, family vs. non family management, and rivalry between siblings, cousins, or across generations. (Prerequisite: BBAC 201)

BBAB 310 Social Entrepreneurship

A social enterprise is a hybrid organization that applies commercial strategies and uses market mechanisms to solve social issues. This course provides a foundation for students to understand social entrepreneurship. It reviews various schools of thought and perspectives on social entrepreneurship's role in tackling social issues, while covering concrete tools for students to begin to engage communities, identify a problem, and develop an innovative solution. (Prerequisite: BBAC 201)

BBAB 401 Management Consulting

A course that exposes students to the basics of management consulting industry. Emphasis will be placed on understanding of the industry context, specific activities of the consulting process and learning the necessary analytical and interpersonal skills required for successful performance of consultant's duties. At the end of the course, the students will be able to view problems from the perspective of practicing experts in the field, apply course theories and principles to provide consulting services to actual clients and prepare solutions to case studies utilizing acquired technical expertise and experience. (Prerequisites: BBAC 201 and ENGL 101)

BBAB 402 Seminar in Strategic Management

Strategic Management is the senior capstone course for all business administration majors. What this means is that it is an integrative, big-picture course.

In this course, students acquire the tools to apply business fundamental knowledge acquired in previous

6 ECTS

foundation courses to strategy formulation, implementation, and evaluation/control approaches. Students are required to use this new knowledge, as well as knowledge acquired from other functional area courses such as human resources, marketing, accounting, finance, operations and information technology, to identify current problems and chart the future direction of different businesses and industries. (Prerequisites: BBAC 400 and ENGL 101)

BBAA 300 Introduction to External Auditing

Modern auditing adopts a risk-based approach. To this end, besides elaborating on the relationship (and distinction) between auditing and accounting, this course capitalizes on the students' professional competences (acquired from other functional areas such as Finance, Management, Management Information Systems, and Financial / Intermediate Accounting among others) that allow them to: Conduct an audit in compliance with US GAAS/ PCAOB; Understand the importance of the auditor's professional business knowledge. Conduct substantive tests. Conduct tests of controls. Understanding the steps involved in planning & executing the audit engagement. (Prerequisite: BBAC 100)

BBAA 301 Fraud Examination & Internal Auditing

This course covers concepts and topics of fraud detection, deterrence and prevention, types of financial statement and occupational fraud, and investigation and interviewing techniques. It also covers functions of internal audit, audit committees and corporate governance, planning and performing the internal auditing engagement, and coordination of internal auditing and external auditing. (Prerequisite: BBAC 300)

BBAA 305 Financial Statement Analysis

A course that covers the relevance and process of accounting and financial analyses within the broader theme of business analysis. The focus is on informational role of accounting, the guality of reporting, the analysis of financing, investing, and operating activities, as well as of different aspects of an entity's financial performance and financial position - all towards the ultimate purpose of informed decision- making. (Prerequisite: BBAC 100)

BBAO 300 Total Quality Management for Business Excellence

This course focuses on the concepts related to quality in all aspects of enterprise operations with special emphasis on the customer. Total Quality Management (TQM) is a comprehensive and fundamental rule or belief for leading and operating an organization, aimed at continually improving performance over the long term by focusing on customers while addressing the needs of all stakeholders. It is both a philosophy and a set of guiding principles that represent the foundation of a continuously improving organization. The bottom line of TQM is results: increased productivity, efficiency, customer satisfaction/delight, and worldclass performance. This course will present the various TQM frameworks, concepts, and quality improvement tools necessary for implementing the quality culture that characterizes world-class organizations of the 21st century. The course will revolve around the core values and the criteria for performance excellence embodied in the Malcolm Baldrige National Quality Award, the highest award for performance excellence in U.S. organizations and which is increasingly being adopted worldwide as the operational definition of a world-class enterprise. We will, therefore, explore the key actions necessary for transforming business and not-for-profit organizations into world-class organizations that deliver everimproving value to their customers, clients, and constituents. (Prerequisite: BBAO 308)

BBAO 301 Introduction to Project Management

This course explores technical and managerial challenges of project management in general. The topics addressed in this course range from project selection techniques, project planning, budgeting, risk analysis, resource management to project monitoring and termination. The goal is to understand how project management decisions are reached, what tradeoffs are made, and how outcomes depend on the underlying situation. Decision analysis tools such as linear/non-linear programming and spread sheet simulation are utilized. Software packages used are Microsoft Project, Risk Solver/Crystal Ball and Excel Solver. (Prerequisites: BBAO 308 and BBAC 202)

BBAO 302 Enterprise Systems Design and Implementation

This course provides students a deeper understanding of business processes and enterprise systems. Different cross-functional business processes are covered, with an emphasis on how they interact to successfully deliver the business functions of an enterprise. The concepts in the course are reinforced using Enterprise Resource Planning (ERP) applications. The course also covers how enterprise data can be used to derive business insights and analytics. The following topical areas are emphasized in the course: business processes and enterprise systems, process integration, systems implementation, and enterprise systems for

6 ECTS

6 ECTS

6 ECTS

6 ECTS

6 ECTS

business analytics. (Prerequisite: BBAC 200)

BBAF 300 Financial Markets and Institutions

This course offers students a broad understanding of how financial markets work. As any other market, financial markets are centered on a certain good (money) and are subject to the forces of supply (lenders) and demand (borrowers) that determine equilibrium price (interest rate). However, unlike other markets, various products can be derived from money, like loans, bonds, equity, mortgages, foreign exchange and financial derivatives. This feature makes the study of financial markets very dynamic.

The course explores the determinants of interest rates and their impact on asset pricing. The material covered include securities markets and their embedded risks, fintech and digital currencies and their disruptive impact on financial markets and institutions. It also covers the working of financial institutions including Commercial Banks, Investment Banks, Mutual Funds, Pension Funds and Insurance companies. Although financial institutions vary in their financial intermediation activities, they all face common risks. The course sheds light on how to measure and manage such risks (**Prerequisite: BBAC 203**)

BBAF 301 Valuation Methods

This course covers techniques used by investment bankers and analysts for enterprise valuation. The techniques used are divided into intrinsic valuation and relative valuation. Intrinsic valuation includes dividend discount models, free cash flow to equity, free cash flow to firm. Relative valuation measures are price-to-earnings, price-to-sales, price-to-book, price-to-cash flow. The focus is on applications and insights as to when and why we use one measure versus another. **(Prerequisite: BBAC 203)**

BBAM 300 Digital Marketing Strategy

This course delivers the frameworks and tools needed to design and implement a successful digital marketing strategy that achieves the business objectives. Topics covered include Social Media and web analytics, influencer marketing, online campaigning, and online customer relationship marketing. The course molds together marketing, analytics, and strategy in the context of social media in a collaborative learning approach that engages students through case studies, guest speakers, hands-on social media tool usage, and an individual final project. (Prerequisites: BBAC 204 and ENGL 101)

BBAM 301 Strategic Brand Management

This course deals with brands—why they are important, what they represent to consumers, and what firms should do to manage them properly. As many business executives correctly recognize, perhaps one of the most valuable assets a firm owns are the brands it has invested in and developed over time. Although competitors can often duplicate manufacturing processes and factory designs, it's not so easy to reproduce strongly held beliefs and attitudes established in the minds of consumers. In this course, students learn the importance of Building, Managing, and measuring the performance of a brand through its equity. The main concepts covered are unique to this course with a main focus on building, managing, measuring and communicating strong brands by developing an Integrated Marketing Communication strategy. (Prerequisites: BBAC 204 and ENGL 101)

BBAM 302 Customer Experience Design

Customer experience is a term that extends beyond traditional definitions of marketing, customer service, customer satisfaction and loyalty. It refers to the sum of all interactions the customer has with a company's brand. Successful companies like Apple, Starbucks, Netflix etc. strive to create holistic experiences for customers that include emotive, sensory, identity value to create strong and enduring customer-brand bonds, which are difficult for competitors to copy or break. (Prerequisites: BBAC 204 & ENGL 101)

6 ECTS

Master of Science in Business Analytics (MSBA)

Purpose and Objectives

The Master's in Business Analytics program (MSBA) prepares students with knowledge, tools, and skills to analyze big data, to make effective business decisions, improve performance, create shared value, and enable the digital transformation from basic to smart organizations. Graduates of the program will learn the various data analytics processes from managing, modelling, analyzing, visualizing, and recommending solutions to challenges in various domains, including supply chain and operations, project management, marketing, human resources, and finance.

Program Objectives

- Data Identify technological frameworks for collecting, preparing, processing, analyzing, and delivering data.
- Skills Develop advanced analytical modeling and problem-solving skills to best address challenges in various industries.
- Reporting techniques Learn reporting techniques with emphasis on visual display of big data and analytical results.
- Communications Learn how to effectively communicate analytical and complex results to different audiences.
- Management skills Develop core management skills relevant to business analytics projects, including designing, planning, implementing, leading teams and managing conflicts.

Learning Outcomes Knowledge

On successful completion of this program the graduate will be able to:

- Identify technological frameworks for collecting, preparing, processing, analyzing, and delivering data.
- recognize the challenges of implementing business analytics solutions, including strategic alignment, planning, project management, team leadership, conflict resolution, negotiation, and convincing techniques.

Competence & Skill

On successful completion of this program the graduate will be able to:

- Clean data.
- Analyze data.
- Effectively communicate complex analytical results and insights to a mixed audience.
- Exhibit advanced analytical modeling and problem-solving skills to best address challenges in various industries.
- Exhibit core management skills relevant to business analytics projects, including designing, planning, implementing, leading teams and managing conflicts.

Responsibility and Autonomy

On successful completion of this program the graduate will be able to:

- Apply advanced analytical models and software tools to address various types of business analytics problems.
- Recommend appropriate analytics solutions to business problems, including defining business requirements, relevant data, needed information technology, competitive edge, and value-added proposition to the business.
- Apply reporting techniques with emphasis on visual display of big data and analytical results.

Study Plan

For successful completion of the MSBA, students must complete all components of the program, which carry a total **of 90 ECTS over 3 semesters**. The program consists of:

- 6 Compulsory (Core)
- 3 electives + Applicative Thesis (also called Capstone) or 2 electives + Research Thesis

Semester 1:

- Core 1 MSBA 500 Business Understanding in Analytics 9 ECTS
- Core 2 MSBA 501 Data Processing Framework 9 ECTS
- Core 3 MSBA 502 Applied Statistical Analysis 9 ECTS
- Core 4 MSBA 503 Optimization and Simulation 9 ECTS

Semester 2:

- Core 5 MSBA 602 Data Visualization and Communication 9 ECTS
- Core 6 MSBA 601 Predictive Analytics and Machine Learning 9 ECTS
- Elective 1 9 credits
- Elective 2 9 credits

Semester 3:

- Elective 3 9 credits
- Capstone Project 9 credits OR

Research Thesis

- 18 credits

Courses and Course Descriptions

MSBA 500 Business Understanding in Analytics

This course will focus on the business understanding and problem framing. This includes analysis of previous findings; identifying stakeholders' challenges and organization eco-system; understanding innovation essentials and components of analytics framework to compete on analytics; developing a data strategy for defining key performance metrics, data quality checks, benchmarking indices; and data sources; introducing big data concepts and technological infrastructure for processing information; discussing innovative business models, appropriate analytical tools and necessary leadership role to implement analytics initiatives and prioritize them for budgeting; efficient in a business domain.

First, the course will establish that business analytics is a distinct but related to analytics in general and that the distinction is the focus of the overall course as well as the whole MSBA program.

Second, this course will familiarize the students with key notions in business, e.g., strategy, operations, and marketing vis-à-vis business analytics. Third, the students will be introduced to a framework of how to devise analytics solutions to business problems. Fourth, the course will demonstrate how analytics can be applied and improve business situations through specific industry and company cases.

MSBA 501 Data Processing Framework

The course focuses on the technology processing of data prior to performing data analytics to extract actionable intelligent insights. It covers data preparation, integration and processing using open-source software tools such as Python, Hadoop and Spark based platforms. Topics include identification of the datasets of interest; preparing the data; building data models using SQL and NoSQL databases and performing operations to explore large and complex datasets. It also explores big data and how and when to integrate big data platforms within an enterprise information system. Through guided hands-on tutorials, students will become familiar with data processing techniques using different frameworks. (**Prerequisite**: MSBA Bootcamp)

MSBA 502 Applied Statistical Analysis

This course is designed to familiarize students with various applied statistical methods and tests. It will enable students to gain statistical knowledge and skills needed to solve business problems. In addition to the overview of hypothesis testing methods and exploratory data analysis (EDA), the course covers in-depth a wide range of parametric and non-parametric regression models such as multiple linear regression with interaction terms, multicollinearity diagnostics, variable selection, logistic regression, and classification and regression trees (CART). Students will already have received an early hands-on training as part of the pre-requisite boot camp on using the statistical tools and packages required for this course such as R/R-Studio, Python, Excel, and SPSS. resource allocation, effective creation of shared values and sustainable performance

growth.

MSBA 503 Optimization & Simulation

This course is an introduction to quantitative models for managerial decisions making in a complex and dynamic business environment. Students learn to develop linear, discrete, non-linear, and multi- criteria optimization models, perform sensitivity analysis, develop constraint programming models, analyze decisions under uncertainty, and conduct scenario analysis using simulation. The course introduces students to some advanced software tools used in optimization and simulation.

MSBA 507 Operations Management

This course gives an overview of the strategic and tactical decisions involved in operating a production or service system for sustainable competitive advantage. Emphasis is on the core concepts of capacity, variability and quality. Topics include: evaluating process capacity; estimating and reducing labor costs; batching and flow interruptions; waiting-time problems and throughput losses; quality management, statistical process control and six-sigma capability; and lean operations. Links among operations, finance and strategic success are explored.

MSBA 601 Data Visualization & Communication

This course introduces students to the latest data visualization techniques and tools to visualize data using dashboards, scorecards, and other formats. Students will learn presentation techniques with emphasis placed on the data story, the visual display of data and smart reporting of results. Students will acquire hands-on skills to create effective presentations leveraging latest technology and software such as Tableau, QlikView, or IBM Insights. Other covered topics include web analytics and communication.

MSBA 602 Predictive Analytics & Machine Learning

Students in this course will learn about supervised and unsupervised training methods. The focus is on identifying relationships that cannot be found by basic statistics and used for example in customer satisfaction, branding, machine failure, resource allocation, fraud detection, and fraudulent activities. Techniques include Nearest Neighbors, Naive Bayes, deep learning, text mining, clustering, association rules, regularization and dimensionality reduction. The bias/variance trade-off and model selection are a focal point of the course and will be illustrated from multiple angles. Students will acquire hands-on experience on all techniques taught.

MSBA 603 Data-Driven Digital Marketing

Digital marketing in the era of fast-browsing, redundancy of choices and lack of time has quickly evolved into a challenging science of perception, with data as its core driver. This course covers the key concepts and strategies of data-driven digital marketing and growth hacking with real-world applications and case studies. The aim is to demystify the role of data in providing critical marketing insights that can pave and shape marketing strategies. Students will examine the various techniques for search engine optimization and will learn how to implement and manage search-advertising campaigns. They will also learn how to effectively engage with customers across a diverse range of social media platforms and experience the best practices for creating and delivering effective e-mail and mobile marketing campaigns. The course utilizes relevant theory, empirical analysis, and practical examples to develop the key learning points. (**Prerequisites**: MSBA 500 **Bootcamp**: Knowledge of R and Python, MSBA 501, MSBA 502)

MSBA 604 Healthcare Analytics

The rise of preventive care, health technology and telemedicine has generated massive amounts of multidimensional health data. The magnitude and complexity of these data are overwhelming for healthcare providers and stakeholders to analyze and extract meaningful knowledge to make informed decisions. Moreover, the COVID 19 pandemic has unveiled profound weaknesses in the healthcare systems of most countries. Global investments in private health systems and private healthcare solutions have witnessed a 6% increase in Q2 2020 and are predicted to increase significantly in the future.

The expected digital transformation will not be possible without data and analytics. In this course, you will be equipped with the knowledge to work in the healthcare field or with a healthcare client as analyst or consultant. You will be introduced to the pillars of healthcare systems and the main health concepts and measures. You will learn about healthcare data types and sources, how to formulate data queries, how to use geospatial information systems to map health data and how analytics is applied in the healthcare field. Finally, you will dive into the economic evaluation and financial impact of health-related interventions and programs. (**Prerequisite**: MSBA 602)

MSBA 605 Forecasting Analytics

Time series forecasting is essential for every organization that deals with quantifiable data. It is widely used in retail stores, international financial organizations, energy companies, banks and lending institutions, and in many other industries. Forecasting analytics enable managers and policy makers to better make informed decisions. This course is a hands-on introduction to quantitative forecasting of time series. Students will learn the most popular forecasting techniques used in practice. The course covers topics such as pre-processing, characterization, and visualizing time series, model performance evaluation, smoothing methods, time series regression models, Box- Jenkins models, autoregressive integrated moving average (ARIMA) models, models with binary outcome, and neural networks for time series (if time permits). (**Prerequisite**: MSBA 502)

MSBA 606 Social Media Analytics

This course addresses the move towards social media to build intellectual capital, communicate with society, exchange knowledge among a global workforce, and provide the public face of business for marketing and corporate communications. The course explores the role of social media technologies (e.g., Twitter) in shaping societal and business trends, and emphasizes analyzing social media data in terms of reach, engagement, influencers, etc. using Python and open-source tools. The course also explores social networks in the important of information propagation in social media. (**Prerequisites**: Bootcamp Python, MSBA 501, MSBA 502)
